Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Plane hit tree, flipped, landed engine first upside down into roof of home (unoccupied at time). Nose, body (fuselage) and wings damaged.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Around 6:15 pm, I, Patrick O'Neill, took off from Sky King airport as Pilot in Command to demonstrate my plane C172 (N-178K) to John Trump, who was considering buying it. Flew to Edgar Co (PRG) and landed on 27 without incident. Plane performed well. We started ~ 9 gallons less than full, so did not feel effects of hot evening and increased density altitude. Back taxied PRG 27 and took off, flew direct back to Sky King (3I3), did mid field crossover entering downwind for 26. Landed on 26 without incident. Was back taxiing 26 to fuel pumps when John Trump requested to fly 178K in pattern one time to test it. I agreed. We stopped the plane in front of pumps/terminal, switched seats, John left, me right ^{seat}. We used each others headphones, leaving them in place. John finished back taxi 26 and took off without incident. By this time estimate 28 gallons fuel on board (full tanks = 43 gallons). John remained in pattern, put carb heat on and dropped rpm to 1700 at 26 threshold on downwind and shortly thereafter put flaps @ 10°. All going well, but noted John did extended downwind past 26 threshold at least 1/2 mile, possibly 1 mile. He turned to base and went to 20° flaps. Towards end of ^{base} noticed plane felt slow, John had noise tilted up and rpm 1500. Recommended level nose and add ^{throttle} to 1700, which he did. When he turned to final runway disappeared behind trees. I felt we were low and slow. Told John to add power for altitude and level nose low for speed. All memory gone after

this point, until awakening in ICU @ Indiana Health. Forensic evidence indicates pilot did a go-around after this point in time, which I cannot refute due to memory loss.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

During training, FAA should require ^{takeoff/} landing plane as a copilot, right seat, at least 5 times, if not more, to familiarize private pilot with operating plane from this position.
