

Communication Summary

April 22, 2016

Information From: Mr. Larry Scott, Laboratory Manager

Summary & Factual Information: Mr. Scott, the lab manager for Core Laboratories/Saybolt indicated, in part, that testing on this liquid sample by filtering it and looking at the solids under a microscope was conducted. The filtrate was blue after filtration and the gas chromatography distillation range of the sample was 185-380 consistent with 100 low lead aviation gas. The solids had the appearance of dirt with some rust.

I can attest that the above summary is correct to the best of my knowledge:

Edward F. Malinowski
National Transportation Safety Board
Air Safety Investigator
