Subject: Joseph Tumminaro Statement

Hi Ken,

My name is Louis and I am Joe's youngest son. Here is his statement, which I took from him at the hospital:

"We approached the Shiprock airport (5V5) with the intention to land and then return to Durango (DRO). I was PIC and flying the airplane. We made a normal approach where I flew overhead and observed relatively calm and favorable winds to runway 20. I also observed the weather ATIS at Farmington (FMN). I made left traffic for runways 20 At 5V5. Approach was nominal, touchdown was in the three point configuration and in the touchdown zone at roughly 50 miles per hour. An unexpected rear quartering gust of wind, which lifted the left wind, forced an exit from the runway to the right. Attempts to counter the exit were unsuccessful. The main gear went into a ditch and the airplane came to rest inverted."

Please let me know if you need anything further from Joe. Thank you.

Louis Tumminaro
