Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

A flight was scheduled on 21 April with a student in a C162 based at KTYQ at 1600 local. When I met the student to discuss the flight, the ceiling was around 3000 feet with a southerly wind of around 10 k and there were rain showers in the area. Due to the rain showers to the west we decided initially we would stay in the traffic pattern to see how the weather developed.

After pre-flighting and doing the runup I did a check of weather radar on ForeFlight with an ADS-B connection. There was a green radar return 3-5 miles to our west with some yellow around 5 miles out. There was a small area of red further out to our northwest. Radar indicated the path of the returns was to the north east. AWOS broadcast just prior to departure indicated lightning in the vicinity.

On takeoff on runway 18, with the student flying I noticed shower activity off to our west, but I believed we would have plenty of time to complete the traffic pattern and reassess if we would terminate the flight or do another circuit in the pattern. On downwind I noticed the weather moving in much quicker than expected with heavy rain. I believed we would land prior to the rain arriving, but we would wait out the shower before flying again. About midfield downwind I noticed we were 300 feet above traffic pattern altitude and told student to reduce power to start a descent. Student replied that power was at idle and we were not descending. At this time I realized we might be in a wind shear situation as the weather was moving in much faster and the rain was going to be very heavy. As we turned base I noticed a Global Express Jet executing a go-around just prior to the end of runway 18. At the same time the G300 avionics announced extreme descent rate, which on glancing at PFD it appeared to be at least 1500 feet/minute with idle power and roughly a level flight attitude. At this point I took control from the student, added full power and a climb attitude. I realized we were not going to get to the runway prior to the heavy rain and did not want to try to land with this type of wind shear condition.

I turned the aircraft to the east/southeast away from the storm, had full power and carb heat on. I would estimate we were 200 feet AGL. As the heavy rain began the visibility was virtually 0, my priority was to keep the wings level and a slight nose high attitude to try to gain altitude. I remembered the student saying pull up and we hit the ground. The student and I asked each other if we were ok, both of us said yes. He departed the plane to call 911 in heavy rain and hail, I shut off master switch and sat there for a few seconds dazed trying to figure out just what happened. My estimate for the time of the accident is 16:45-1700.
