NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I departed Fiese Airstrip (2NE5) to treat a Wheat field approximately 9 miles away with Fungicides. I ferried at approximately 500 feet AGL descending to approximately 100 feet AGL and circling the field. See enclosed FSA map. I then set up to make a pass from the Northwest corner of the field to the Southeast corner descending to approximately 25 feet AGL to prime the spray booms purging them of air and rinsate. I turned the booms on at the corner and was approximately in the middle of the field and had shut down the booms when the Aircraft suddenly nosed over, descended impacting the ground. The Aircraft slid nose down for a distance until the Left boom caught the Wheat causing the Aircraft to slide right wing forward. I then believe that as the Aircraft slowed the empennage came down entering the Wheat twisting the empennage to the Left. I believe that the right wing then contacted the ground causing the Aircraft to go airborne. The Aircraft then landed inverted with very little forward motion. I exited the Aircraft through the Left-hand Cabin window. I have been associated with Aviation and Aerial Application all my life. I graduated from the Northrup Institute of Technology Airframe and Powerplant School. I began actual Aerial Applications in 1976. I have performed passes to prime the booms literally thousands of times without incident. After much thought and analyzation, it is my belief the incident was caused by a problem in the empennage. In 2011 I contacted Mr. Don Shorney of Central Nebraska Aeromotive about rebuilding my Super Cub. We discussed a list of things that I wanted accomplished during the rebuild and why. One of the major items was the replacement of the horizontal stabilizer trim jackscrew assembly. Because the center-of gravity for the Sorensen tank is slightly aft of the center-of lift, the Aircraft trim is adjusted quite often. There was a substantial amount of slack movement in the assembly. During the reassembly process I discovered the the jackscrew assembly had not been replaced. I was told that it had been "tightened up". That is not possible but it was to late to replace it at that point without fabric removal. I have since discovered that the rebuild process was quite questionable. There has been a large number of defects discovered starting when Mr. Don Imhof landed when he delivered it. When Mr. Imhof had parked in front of the Hangar, he opened the door and asked if I had a AN3 castle nut, washer and cotter pin as they were missing on the connector straps for the aileron balance cable. I said that I did and would also bring some tools. He said that He did not need the tools as he had brought a tool bag with him. I got the hardware and he installed them before exiting the Cub. As a number of other problems would arise I would repair them if I could. Just prior to this flight I had corrected another problem. I have also discovered that this is at least the third accident subsequent to maintenance that was performed by Central Nebraska Aeromotive.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

In my opinion, there was a failure/malfunction in the empennage.
