Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*
 Bent front landing gear, bent L side landing gear, bent L wing strut, crumpled L wing tip, scuff w/ small crack in the nose, bent pitot tube.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*
 Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Arrived @ my airport hanger @ approx. 11:00. Rolled out the aircraft & conducted appropriate initial inspection checklist. Process takes about 35 minutes. Checklist completed. All external systems w/in normal limits. Entered the aircraft & fastened restraint harness. Put on headset. Listened to automated weather report & set altimeter. Began pre-start checklist. Manipulated stick & rudder peddles to test control surfaces. All control surfaces appropriately responsive. Set brake. Primed throttle, "CLEAR", started the engine. After initial engine start, I ran the engine @ idle for 5+ minutes to bring up the EGT & CHT to operational spec. Monitored all gages throughout pre-taxi process. Engine ran smoothly. All gage readings were w/in normal range. Announced on radio position relative to runway & intention to begin taxi to runway 27. All systems w/in normal range during taxi. Wind conditions were calm, taxied to hold line for runway 27. Set brake & advanced throttle to 2500 rpm for mag check. Mag check successful. Engine running & sounding normal. Throttle back to idle. Check pattern for traffic. Pattern clear. Made last check of the weather conditions & confirmed altimeter setting. Announced my departure from runway 27 & direction of flight upon leaving the pattern. Slight throttle up to advance aircraft to runway centerline, then slow advance of throttle to full power for take off. All systems remained w/in normal range. Acheived lift & nosed the aircraft up to assume Vx. After a few seconds of "normal" flight, the engine abruptly lost all power. As my flight path was still over the hard surface & the winds were calm, I immediately attempted a left turn to try to put the aircraft down on the grass landing strip that is located directly parallel to the hard surface. Attempted to make all appropriate adjustments to the aircraft control surfaces to the best of my ability. Acheived a hard, semi-controlled landing @ mid-field on the edge of the grass strip. As the aircraft remained fully intact, there was no debris field. Made radio announcement to report situation & alert any local air traffic that the runway would be temporarily closed. Turned off the engine. Turned off fuel pump & electrical switch. Exited the aircraft. Airport personel towed aircraft back to my hanger where it presently remains.

Operator/Owner Safety Recommendation

Aircraft was maintained by the book, I
don't know what else I could have done.
