Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Nose wheel collapsed, propeller bent. No damage to other property.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Arrived at OSH (Oshkosh, WI) Tuesday, 7/26/16. Basler FBO topped off my fuel tanks with 15 gals Mogas (STC for Mogas) (38 gals usable on board now) on 7/29/16. Sunday morning, 7/31/16, I checked the weather, preflighted the plane and started to taxi at approximately 0930 and departed OSH at approximately 0945. Destination: C09 (Morris, IL) Approximately 1 hour and 50 minutes after departing OSH, I was at 2500 feet approximately 12 miles north of C09. There was a sudden loss of power immediately followed by a vibration and the engine shaking badly. I placed the fuel mixture on "full rich", confirmed mags were on "both" and fuel switch was on "both tanks". There was no improvement in engine performance. At this time I noted the oil temperature and oil pressure were "in the green". GPS now showed my position as 10 miles north of C09 and nearest airport on my GPS data base showed one 6 miles away. I now started to hear a "squeaking-like" noise from the engine. Maintaining altitude was now becoming questionable. At this point I made the decision to find a safe, suitable field on which to land. Mainly looking for a field that had been cut, verses landing in a corn field and not knowing what was below the visible surface. Located a cut field that from the air showed no people, vehicles, animals or obstructions and had sufficient length. Hearing traffic on 122.8 I announced my situation on that frequency including type aircraft, souls on board and my location from C09. I did get a reply from another aircraft. Also squawked 7700. I turned to final, and this became a grass field landing. I touched down close to my intended target and began the roll-out and applied brakes. In this field of yellow were a couple of long narrow green grass rows. About 2/3 of the way down my landing runway was one of these rows. I wasn't going very fast but as I got closer I realized this grass row was a dirt berm a couple of feet high. As the nose wheel made contact, the nose of the airplane pitched upward. Then the rear landing gear came in contact with berm, accelerating the nose coming down, which in turn collapsed the nose gear and bent the propeller. I immediately exited the plane and determined I had no injuries. I smelled fuel, returned to the plane and switched the fuel to off. My phone and flight bag were on the seat next to me before the landing. I found them both and called 911.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Flying at a higher altitude would have increased the time to deal with these issues.
