The plane landed at 8:43 pm and turned around and drove to the end of the run way. He spun the plane around again and took off west. I took a video of him taking off, then reviewed the video. When I looked up the plane appeared to have done some sort of loop. He was facing north when I saw the plane was too low to the ground and not level enough to get up away from the ground. He was slightly pointed down when I lost sight of him. I could not see him but I heard a loud bang. The motor of the airplane then shut off making no more noise. It was then when I realized he had crashed into the corn In between the airport and the house on the north side of the road.
