☐ On-Ground ☐ Unknown

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

No property damage - landed in a marsh

Belly under engine - forward of main landing gear

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Departed MN24 for KOEO at approximately 2:00pm on 08/14/2016. 1900' level dry grass runway with 6-10 foot high brush at end of runway.

Back taxied to end of runway, performed run up which was ok, performed short field takeoff (hold brakes, full throttle, release brakes). Sitting in the back seat, I verified before takeoff that all switches (Beacon, Navigation Lights, Landing Light, Master Switch, and both Mag switches) were in the up position. This was also verified after the crash when I shut off everything. All switches up is normal operating procedure for this aircraft.

We started the takeoff roll and at a point when it seemed appropriate speed was reached I visually confirmed and verbally confirmed with the pilot that the stick was forward to lift the tail. The tail didn't come up as far as I had expected. I also reconfirmed that the throttle was full forward and the carb heat was off (forward position).

At a distance when a decision had to be made to abort or takeoff, a split second decision was made to continue. The thought being that if the takeoff was aborted and we hit the brakes hard we could flip over or skid into the brush at the end of the runway at a high speed, flip over, and go down the embankment.

The plane wanted to fly because, as is normal for a tail wheel in a certain pitch attitude, it will start to bounce a bit which was exacerbated by the grassy ground. At the last minute before the brush was reached, the plane was pulled up briskly to clear it. The right main or tail wheel caught some brush which destroyed some acceleration. We were unable to maintain what little altitude we had between the runway and the swamp below. We plowed through the reeds and cattails before the wheels touched firm ground and we slowly flipped upside down.

We assessed our physical health, opened the door, unbuckled, and got out. After the crash retrieval, I confirmed that the mixture was full rich and the primer was in and locked.

Wreckage was all intact.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Shorten the distance by which to abort the takeoff.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
