Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

At approximately 1215, during the midday refueling and shift change on August 25, 2016, I accepted the aircraft N66898 from the pilot of the morning shift. I queried the pilot about the weather conditions of the local area that he had been experiencing and also the condition of the airplane. He briefed me on the weather being normal and had a brief comment about the airplane sometimes being difficult to turn in one direction while taxiing. After a pre-flight and refueling, I obtained a clearance to cross the center runway and line up for my glider tow on runway 16L. I noticed no discernable deficiencies in the airplane while taxiing. The take-off was normal and I towed the glider to an acrobatic area on the property.

Upon returning to the airport several minutes later, I was given clearance to land on runway 16L, the narrower and shorter of the two runways used for glider operations. I entered the pattern from a right base leg, which is normal for this operation. I touched down with a wheel landing and began decelerating. As I became slow enough to begin lowering the tailwheel, I encountered a large gust of wind from my right which raised the right wing. In an effort to regain directional control by applying rudder and slowing sufficiently to get the tailwheel on the ground, I applied pressure to both wheel brakes (heel brakes). When this happened the left brake seemed to grab much more efficiently than the right brake and the airplane turned quickly to the left, exiting the runway. The airplane rotated counter-clockwise and just prior to coming to a stop, the right wheel dug into the soft dirt of the shoulder and the right wing made momentary contact with the ground. The airplane came to rest in a three-point configuration approximately 270 degrees and 10 feet to the left of the 40-foot-wide runway. The propeller did not make contact with the ground or any object and the engine continued to run until I shut it down. After exiting the aircraft, the only noticeable damage that I could see was a small scuff to the fabric on the right wing tip.

After obtaining clearance from airport rescue, I taxied the aircraft to the maintenance hangers. There I was met by the lead maintenance supervisor and two other mechanics. As we looked over the airplane I noticed a slight wrinkling of the top of the fabric near the right wing tip. I specifically asked the head of maintenance if the damage was sufficient that I should make a report to the FAA and the NTSB. He told me no, that all I had was a slight "fender bender", insufficient to be called an accident.

After turning the aircraft over to maintenance, the chief pilot advised me by telephone that I should obtain a drug test at a local designated clinic, which was a customary procedure. After receiving clearance from the drug test, I drove home. That afternoon I submitted a report via e-mail to the chief pilot and was told that it would be forwarded to the head of maintenance. I did not hear about the airplane's condition from anyone at the Air Force Academy. Based upon the information that I received from the mechanics and with no further communication from the Air Force Academy, I assumed that no substantial damage had occurred. Several days later I received a phone call from one owner of Big Q Aviation and was told the condition of the airplane and that an accident had been reported.
