Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Lower firewall bent. Lower forward skin damaged. Floor boards from F.S. 22 to F.S. 8 wrinkled. Center pedestal damaged. Tunnel damaged. Lower instrument panel support damaged. Basic lower forward quarter of aircraft received damage. Door post forward and below floor boards. Transferred to instrument panel by center pedestal.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Unknown

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Hard to say without knowing who the pilot was or any details regarding when and where the incident occurred.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

N51827 is made available through Ideal Aviation for flight training (Part 61) and general rental (Part 91). It is a popular plane, and it flies an average of 70 hours per month.

On Monday, Oct. 24, 2016 the plane was taken to our maintenance facility for a routine 50 hour oil change. When the lower cowl was removed the A&P mechanic noticed that the lower firewall was bent, indicative of a hard landing. Further inspection revealed damage to the right floor board, the lower forward skin, the center pedestal, and the lower instrument support.

The last time previous to this discovery that the cowl had been removed was during a 100 hour inspection on Sept. 27, 2016; there was no damage noted at that time. In the 27 days between service visits, the plane made 62 flights with 20 different pilots. 32 of these flights were made by students with a CFI on board.

After discovering the damage, Ideal management contacted the CFIs who had flown the plane during the days preceding the discovery of the damage, and they said that there were no anomalies observed during their preflight inspections or during flight. They said "the plane flew fine." They were also unaware of any recent hard landings which might have caused the damage.

There was one flight on October 8, 2016 where the tube on the nose tire split after a student "bounced" a landing on a solo flight. When asked about it at the time, she claimed that the landing was no harder than others she had experienced during training, and she seemed surprised that the tire had gone flat. When the A&P mechanic repaired the flat, he found a small split in the tube; he saw no other damage to the tire, wheel, strut, or cowl that would indicate a hard landing. The tube and tire were replaced and the plane was returned to service. While this may have been the incident which caused the firewall damage, we can not say this with any certainty, especially given the number of flights made with 20 different pilots during the month when the damage is presumed to have occurred.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
