NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The blimp had a successful flight from 8:30am CDT around the US Open in Erin Hills WI. at approximately 10:40am CDT the pilot brought the blimp back to the Erin Arrow airpark to refuel and was back in the air by 10:50am. The winds were starting to pickup slightly so the pilot decided to bring the blimp back in for a landing. while on approach to land the blimp caught a thermal and went from approximately 200 feet AGL up to 800 feet AGL (this is normal and fairly common). Upon recovering from the Thermal the pilot hears a loud pop and sees a panel directly overhead completely blown out. He immediately starts his emergency procedures when a few seconds later a second and then third panel blow out. The airship then starts to fold in on itself and eventually catches fire.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I understand this is still under investigation. We have talked extensively to industry leaders concerning this accident and everyone says the way this airship failed is impossible unless an exterior object penetrated the various panels that failed at some point prior to the incident. Then when the pilot got caught thermal the increased load on the potentially damaged panels caused the failure.
