Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

After a propeller and engine over speed, the engine catastrophically failed. During this time period at least two connecting rods were thrown out of the engine case. The airplane was safely recovered without damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The purpose of the flight was to calibrate an Advanced Flight Systems Inc. Angle of Attack indicator (Pro Model). The calibration of the AOA system required a series of zero G maneuvers. While performing the first zero G maneuver, the oil pressure dropped and the propeller then oversped. A noticeable "bang" sound was heard, in approximately one second, the engine RPM rose from 2700 RPM to 3140 RPM as captured by the Electronics International MVP-50 Engine Monitor. During this time period at least two connecting rods were thrown out of the engine case. The airplane was flown engine out to KFZY and landed without any damage.
