Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Left inbound gear door separated from aircraft. Impact damage to left horizontal stabilizer and elevator. No reported damage to property on ground

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

ALTITUDE: 1600 msl RWY: 13 AIRSPEED: 155 mph
TYPE Aircraft/Registration: North American B-25/ NA25YR

On left downwind leg the PIC called for landing gear to the down position. As landing gear was in transit, the crew felt a momentary jolt that was thought to have originated from the nose gear area. First impression was that a bird had impacted the front of the aircraft. Main gear extended normally. The nose gear was slow to indicate a "down and locked" position. There was a slight shudder to the aircraft and within a few seconds the nose gear showed "down". A quick controllability check was performed as the turn was made from downwind directly to final. No abnormal control issues were present and the crew elected to continue the approach and subsequent normal landing. After parking the aircraft, the crew was informed by another aircraft in the pattern that an object had departed the subject aircraft while in the pattern (downwind leg) as the gear was extended. Ground observers reported seeing the same. Upon inspection, it was apparent that the left gear door had separated from the aircraft striking the left horizontal stabilizer and left elevator. No other damage was readily apparent. The gear door was later recovered approximately one and a half (1 ½) miles from the airport property along a line that paralleled the downwind leg. Initial reports did not reveal damage to property or injury to person or persons in the area where the door was found.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Periodic checks on landing gear support brackets.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Left inboard gear door separation from aircraft. Part then impacted the left horizontal stabilizer and elevator
