

NATIONAL TRANSPORTATION SAFETY BOARD

NTSB Form 6120.1

PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

Email the pilot/operator aircraft accident/incident report to the investigator-in-charge of your accident/incident. If email is not available, mail the report per the instructions below.

If your accident/incident occurred in Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Maryland, Delaware, Virginia, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Mississippi, Alabama, Georgia, Florida, the District of Columbia, Puerto Rico, or the US Virgin Islands, send the form to: NTSB, ERA, 45065 Riverside Parkway, Ashburn, VA 20147.

If your accident/incident occurred in Ohio, Michigan, Indiana, Wisconsin, Illinois, Minnesota, Iowa, Missouri, Arkansas, Louisiana, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Colorado, or New Mexico, send the form to: NTSB, CEN, 4760 Oakland Street, Suite 500, Denver, CO 80239.

If your accident/incident occurred in Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, Oregon, California, Hawaii, or the territories of Guam or American Samoa, send the form to: NTSB, WPR, 505 South 336th Street, Suite 540, Federal Way, WA 98003.

If your accident/incident occurred in Alaska, send the form to: NTSB, ANC, 222 West 7th Avenue, Room 216, Box 11, Anchorage, AK 99513.

Rules pertaining to notification of aircraft accidents and incidents, as well as overdue aircraft are found in 49 *Code of Federal Regulations* (CFR) Part 830 http://www.ecfr.gov/cgi-bin/text-idx?c=ecfr&tpl=/ecfrbrowse/Title49/49cfr830_main_02.tpl. These rules state the authority of the NTSB, define accidents, incidents, injuries, and other terms, and provide procedures for initial and immediate notification of accidents and incidents by aircraft pilots/operators.

A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

INSTRUCTIONS TO PILOTS/OPERATORS FOR COMPLETING THIS FORM

It is necessary that ALL questions on this report be answered completely and accurately.

If more space is needed, continue on a blank sheet of paper.

Nearest City/Place: Use the name of the nearest community in the state where the accident/incident occurred.

Date/Time: Indicate the date and local time of the event. Be sure to indicate the time zone.

Phase of Operation: Indicate the phase of operation during which the accident/incident occurred.

Aircraft Information: Enter aircraft make and model information as indicated on the aircraft registration certificate, including series. If the involved aircraft is certified as "amateur-built," include the name of the producer of the kit or plans, unless an NTSB employee instructs otherwise.

Maximum Gross Weight: Enter the certificated maximum gross weight for the aircraft involved in the occurrence. This should be the same as the maximum gross weight indicated on the aircraft weight and balance documents.

Engine: Enter engine make and model information as indicated on the engine data plate.

The NTSB uses this form for aircraft accident prevention activities and for statistical purposes. NTSB regulations (49 CFR Part 830) require that **ALL** questions be answered completely and accurately. Completion of this form will take approximately 60 minutes. The NTSB does not guarantee the privacy of any information provided in this form. You need not complete this form unless it displays a valid OMB control number, in accordance with 5 C.F.R. § 1320.5(b), which applies to this collection of information.

B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowling, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

Type of Fire Extinguishing System: If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

Owner/Operator Information: Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

Revenue Sightseeing Flight: Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

Air Medical Flight: Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

Public Aircraft: Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

Purpose of Flight: 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

AERIAL APPLICATION--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

AERIAL OBSERVATION--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

AIR DROP--Aerial operations, other than aerial application, that are intended to release items in flight.

AIR RACE/SHOW--Includes any flight operations conducted as part of an organized air race or public demonstration.

BUSINESS--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

EXECUTIVE/CORPORATE--Company flying with a paid, professional crew.

FERRY--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

FLIGHT TEST--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

INSTRUCTIONAL--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

OTHER WORK USE--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

PERSONAL--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

POSITIONING--Non-revenue flight conducted for the primary purpose of relocating the aircraft. Examples include moving the aircraft to a maintenance facility or to load passengers or cargo etc.

UNKNOWN--Use only if the primary purpose of flight is not known.

Other Aircraft--Collision: For all accidents involving a collision with another aircraft, including parked aircraft, check "Collision with other aircraft" under Basic Information and complete this section indicating details about the OTHER aircraft involved in the collision.

Airport Information: Complete this section if the accident/incident occurred on approach, landing, takeoff, departure, or within 3 statute miles of an airport. Please refer to the FAA Airport/Facility Directory or other official source for airport information.

Airport Identifier: Provide the official 3 or 4 character airport identifier number.

Runway: Indicate the number of the runway used, including L, R, or C if applicable.

Runway/Landing Surface: Indicate the type of intended runway/landing surface (do not indicate surface conditions). If the surface type was mixed, check all that apply.

Condition of Runway/Landing Surface: Indicate the condition of the intended runway/landing surface. If multiple conditions existed at the time of the accident, check all that apply.

Weather Information at the Accident/Incident Site: Indicate the weather conditions reported at the accident/incident site at the time of occurrence. If no weather reporting was available for the accident/incident site, indicate the reported conditions at the nearest reporting site. Specify the weather reporting site identifier, the observation time, and distance from the accident/incident.

Sky/Lowest Cloud Condition: Indicate the height above ground level of the lowest cloud condition present at the time of the accident/incident and whether coverage was reported as few, scattered, broken or overcast. Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs: Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

Flight Crewmember Information: Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

Degree of Injury: See Definitions on the top half of Page 1 of the instructions. Minor injury is not defined. If an injury does not meet the criteria for another injury category, select Minor.

Date of Last Flight Review or Equivalent: Enter the date of the most recent flight review, or equivalent, completed by this pilot. Refer to 14 CFR 61.56 for accepted equivalents.

Type Ratings: List all type ratings on the pilot certificate. If the pilot holds no type ratings indicate "none." If the pilot holds a pilot certificate other than student and was flying an aircraft requiring an endorsement, enter the type and date of any logbook endorsement(s) for that aircraft. See 14 CFR 61 for examples of required endorsements.

Student Endorsements: If the pilot holds a student pilot certificate, enter all solo endorsements and dates on the student pilot certificate.

Flight Time: Complete the flight time matrix. Solo flight time should be included as "Pilot-in-Command (PIC)" and all dual flight instruction given should be included as "Time as Instructor."

Additional Flight Crewmembers: Complete this section if there were more than two required flight crewmembers on the aircraft. This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

Passenger(s)/Other Personnel: Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to www.ntsb.gov.

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

LANDING GEARS AND WINGS.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I filed my IFR flight plan for departure from San Jose International airport (KSJC) to Pueblo, Colorado (KPUB) on December 4th 2016. My plane N332SE was parked at Atlantic Aviation FBO. My son and I arrived at the FBO around 2:00pm. I told the girl behind the counter to put 100 gallons of fuel per side positive and I will be taking off in about half hour. I asked her if my son and I could go to plane to put away my luggage and perform pre flight inspection of the plane. She let us go out to plane but unlike at most FBO's no one helped us with our luggage to the plane. My son and I put the luggage away in plane and I did a pre-flight of the plane. I turned on the plane radio and call departure for my IFR flight clearance. I checked fuel gauge and it was showing approximately 500 lbs. of fuel in each tank (Initially I thought I had about 1000 lbs. per side when I told FBO to put 100 gallons per side). As we were ready to go back to FBO, the lines people came and told me that they would tow the plane when other plane in front of us departs and would put the fuel in at that time. Once my son and I went back inside the FBO I told the same girl to please change my previous fuel order (instead of putting 100 gallons per side please top off the plane positive) and please top off the plane. She acknowledged my revised fuel order and radioed to the fuel line people to say top off the plane for N332SE. We saw the fuel truck pull up to our plane. After 15-20 minutes I paid for the fuel (but did not check my receipt) and said good bye to my son and told him that I would call him from Pueblo. As I was walking to my plane there were no line men and both the main wheels had chocks in place. I thought someone would come and take the chocks away so I went in the plane and buckled up and went through the before start up check list but still nobody came to remove the chocks so I unstrapped, open the door and removed both the chocks myself, pretty annoyed with the continuous lack of service from FBO and went back inside the plane, locked the doors and got ready to start the plane. Then at that time the lines man shows up with no interest in doing his job – I started the plane and checked the before taxi check list and set up the flight route and departure procedure in my Garman. I called ground for taxi clearance and I was cleared to taxi for runway 30R. I tried to signal lines man that I am ready to taxi but he was looking somewhere else. He finally looked at me and gave directions so I can pull out and turn for taxiway – Checked and verified taxiing check list items. Call tower informing that I am ready for take off – once cleared for take off, checked and confirmed and verified before take off list and took off for KPUB.

Sometime during cruise at FL 370 (may be about hour in flight) I looked at the fuel gauge and notice that fuel gauge was showing only about 900 to 800 lbs of fuel each side and fuel remain for flight time was showing 2 hours fuel remain at cruise level. At this time I realized that FBO did not top off the plane but they put only 100 gallons per side. Knowing this I reduced my throttles (N1) to about 90% each side and keep monitoring my fuel gauge and fuel remain gauges. I kept lowering my N1 as fuel was getting used. I also did fuel cross feed to keep both fuel tank equal. At some point in time I got clearance to descend to FL340 and sometime after that clearance to descend to FL 270. During descent I kept throttle lever to minimum to conserve the fuel. When fuel gauge was showing about 700/600 lbs. of fuel left in each tank and fuel remain gauge showing 1.20 hours and time to destination was about 35 to 40 minutes, I lowered N1 to about 70% and fuel remain was then showing around 1.5 hours.

At this time I thought that I would make it to KPUB with possible 45 min of fuel reserved. When the right tank fuel gauge showed about 500/400 lbs. and right engine low light flashing came on and then my left engine low flashing fuel low yellow light came on – I turn both fuel boost pumps to on position. Time to destination was about 25 minutes and fuel remaining gauge was showing about 1.00 hours. Now both flashing lights became solid yellow, I lowered N1 to 65% and fuel gauge showing 400/300 lbs. and fuel remain gauge was now showing 1.1 hours. I was now not sure to believe the fuel gauges so I called ATC and informed that I have low fuel lights and needed nearest airport to land. ATC asked me how much fuel I have and I said about 20 min. and ATC said to me that I will not make it to KPUB so ATC diverted me to KGUC airport and gave me a heading I think to 240 and cleared me ILS runway 06.

See attached sheets for continuation:

Yatish Joshi
N332SE accident report

NARRATIVE HISTORY OF FLIGHT:
Continuation from Page 9.

At this time I loaded the plates for KGUC in my flight bag (iPad) and both ILS 06 and RNAV 24 runways. At this time I thought RNAV for 24 will give me straight in for runway 24 so I requested ATC to change my clearance to RNAV 24 approach. ATC did and gave me clearance for RNAV and gave me way point to fly to and I did. ATC ask to me decent to 15000 feet. Mean time I loaded the RNAV approach into my Garman 530 but I was flying the plane manually and I asked ATC for help to locate the airport since sky conditions were clear and visibility was more than 10 miles and I could not see the airport. ATC told me airport was at 11 clock and 6 miles. I looked to my left side and saw the airport with very bright lights and I told ATC that airport is in sight. ATC cleared me for visual approach to runway 24 and ask me to cancel IFR on his frequency or from ground and radar service is terminated. I acknowledged the clearance and tried to land plane on runway 24. I lowered fuel throttle to minimum and started descending and turned on my speed break to reduce the speed. Once speed was below 200 I lowered 15 degree flap and put the landing gear down when speed was below 176 and then full flap. I was still high and fast. I turned off my speed break when I was about 500 feet but my airspeed was still around 120. Light on the runway was very bright and I missed judge the runway and my height above ground and I landed very hard on runway 24. Both main wheels touched down and I was lowering my nose and turning on speed break, I felt my right wheel hit something so I think I lifted my nose up and plane flared and plane went up about 5-10 feet or more up in the air and came down very hard on runway and bounced twice and I start hearing things breaking and my nose gear collapsed and plane was sliding on the runway and after a while it start sliding to left and came to stop in grass covered with deep snow off the runway and I can smell burning wires and smoke coming out of instrument panel. I put throttle to cut off position and turn the battery off. I unstrapped myself, picked up my luggage and my notebook and iPad opened the main door and got out of the plane. Walked about 200-300 yards to terminal and knocked on the doors since they were locked. A police officer inside the terminal came and opened the door for me. I told him that I just landed and plane crashed and came to rest in grass off the runway. He asked me if I am OK and I said yes then he left in his car look for the plane and then he called in for help and also called 911 for EMT.

EMT questioned me to make sure I was OK and wanted to take me to hospital for check up. I said I am completely fine and told them that I must call flight service to cancel my flight plan. I called Denver center and told them I am on the ground, but plane has crashed and I need to cancel the flight plan. I called my wife and my children to let them know what happened and that I had an accident during landing and that I am OK but plane is crashed. After about 30-40 minutes police officer asked me to come with him to the crash site because people at crash site have questions for me. So I went with him to the crash site. A few people asked me what happened. Were the engines running when I landed and how much fuel I have in the plane? I told them what happen and both engines were running during landing and there is very little fuel left in the engine. After my statement I think they approached the plane and start taking photos.

As I was very cold during all this time and somebody notice that and asked me if I would like to go back to terminal get warm and do I want anything else. I said yes, I would like get back to the warmth and

like some hot coffee. FBO personnel at airport took me to his FBO and made fresh pot of hot coffee. Now I realized that my back and neck were hurting badly and told them that maybe I should go to hospital for check up. They took me to emergency at hospital and I checked myself in. Doctor examined me and took blood for testing and CT scan. A police officer came to check on me. After looking the CT scan doctor told me that no new trauma from the airplane landing but I should follow up with my back/spine physician at home about this in the near future, as it might be made worse by this accident and discharged me. Person at the FBO was waiting for me at hospital and took to me to nearby Holiday Inn. I spent night at the hotel. My wife booked the flights from Gunnison departing 12:45pm to South Bend. Hotel shuttle in the morning took me to FBO around 10am. I spent about an hour at FBO and then they took me to terminal to catch my flight to South Bend. My wife picked me up from South Bend airport and we returned to our home.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Owner safety Recommendation:

1. After starting the engine but before taxiing, must check and verify fuel in each tank.
2. Make sure that FBO puts in the right amount of fuel per your instruction.
3. Check the paid receipt to verify that all the charges are correct and they put the fuel per your instruction.
4. Regardless of how bad the service is at the FBO, you must be able to shake off your annoyance and stay calm and focus on your main objective – flying safely to your destination.
5. During taxi but before takeoff check and verify that you have enough fuel for your destination and verify that avionics, engine gauges, flight instrument panel is clear, trim and flap are set for take off.
