At approximately, 9:36 am on Tuesday December 20, 2016 at the Longville airport, an airplane touched down approximately halfway down the runway traveling North. The nose gear hit the ground first and bounced approximately 50-75 feet in the air and came down veered sideways off the west side of the runway. At the time the airplane crashed, I was plowing snow in front of a new hangar. What happened on the south end of the runway, if anything, I did not see. I immediately went over to assist the pilot and helped him out of the airplane after calling 911. I then assisted him to the ambulance.
