Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Collapse nose gear, Prop strike, severe damage to empennage
Damage to both wing tips and aileron.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Attached: Copy of statement provide to FAA investigators.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

1. I have been flying a King Air 200 twice/wk for two years. It is less responsive to flight control input. This might have contribute to my over controlling of this RV&A.
2. Might have been more wind and gust than what was reported on AWOS. I remember the windsock was blowing and variable.
3. The sloping terrain and roughness of airport property at touchdown contributed to a lot of the aircraft damage.

Pilot statement concerning accident of N918KS

Tuesday December 27, 2016 I planned with my 13yr grandson a one hour local scenic flight. Got to hangar at approximate 11:30 cst. Performed walk around inspection of aircraft and all was in order with engine oil at 8qts. clean oil. Checked the fuel with dip stick and had 13 gals. In left tank and 15 gals in the right tank. Secured fuel caps.

Engine start was normal. Set radios and GPS to allow some warm up of engine before taxing. Taxied to hold short of main taxiway and then obtained AWOS. Set altimeter and rechecked instruments then continue taxing to run up area for runway 02. Run up was completed with all normal indications. Performed takeoff checks and taxied onto runway for takeoff using full length.

Added full power on takeoff roll with all indications normal. Aircraft accelerated normally with a slight drift to left of centerline. At 65 mph I rotated and the aircraft lifted off. Immediately after liftoff the left wing came up I assumed from wind and some gust. I immediately put a correction into the left. The input was too much and I found myself now in a steep bank and turn to the left requiring another correction to get wings level. After getting directional control of the aircraft I realized that I had departed the runway area at an estimated 60 degrees from the runway heading. At this point I felt too low to try to correct back to the heading or runway without possibly striking the wing or maybe putting the aircraft in a stall. In fear of leaving the protected area of the airport perimeter my instinct was to get and keep my wings level and reduce power and land on the airport property. Not realizing that the terrain sloped down and to the left and rougher than expected made for a rough and hard landing. After the first impact with the ground and I'm not sure if wheels hit or tail hit all control of aircraft was lost. When aircraft came to a stop I yelled to my grandson to hear if he was ok, he was, then I yelled to him to get out. I secured the mixture and all electrical switches and then exited the aircraft.

I checked the condition of my grandson and he had a small cut on the bridge of his nose and I had a small scrap on the chin.

My most instinctive concern was not to get the aircraft in an unrecoverable stall with a possible roll over and crash or a possible wing low and ground strike creating a wing nose cart wheeling.

With the slope of the airport terrain and rough ground sever damage was done to the tail and wings. The collapse of the nose wheel resulted in the prop striking the ground shattering.
