#### A. APPLICABILITY

The pilot/operator of an aircraft shall send a report to the office listed above, based on accident/incident location; immediate notification is required by 49 CFR 830.5(a). **The report shall be filed within 10 days after an accident for which notification is required by Section 830.5, or after 7 days if an overdue aircraft is still missing.**

An aircraft accident, as defined in 49 CFR 830.2, is determined as an occurrence that involves a fatality or serious injury, or substantial damage to the aircraft. For occurrences that do not involve a fatality, the determination that the occurrence is an accident can be appealed by writing to the Director, Office of Aviation Safety, NTSB, 490 L'Enfant Plaza, S.W., Washington, D.C. 20594.

#### B. DEFINITIONS

1. "Aircraft Accident" means an occurrence associated with the operation of an aircraft that takes place between the time any person boards the aircraft with the intention of flight and all such persons have disembarked, and in which any person suffers death, or serious injury, or in which the aircraft receives substantial damage. For purposes of this form, the definition of "aircraft accident" includes "unmanned aircraft accident," as defined at 49 CFR 830.2.

2. "Substantial Damage" means damage or failure that adversely affects the structural strength, performance or flight characteristics of the aircraft, and that would normally require major repair or replacement of the affected component. NOTE: Engine failure or damage limited to an engine if only one engine fails or is damaged, bent fairing or cowlings, dented skin, small puncture holes in the skin or fabric, ground damage to rotor or propeller blades, and damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wing tips are not considered "substantial damage" for purposes of this report.

3. "Operator" means any person who causes or authorizes the operation of an aircraft, such as the owner, lessee, or bailee of an aircraft.

4. "Fatal Injury" means any injury that results in death within thirty (30) days of the accident.

5. "Serious Injury" means any injury that (1) requires hospitalization for more than 48 hours, commencing within 7 days from the date the injury was received; (2) results in a fracture of any bone (except simple fracture of fingers, toes, or nose); (3) causes severe hemorrhages, nerve, muscle, or tendon damage; (4) involves injury to any internal organ; or (5) involves second- or third-degree burns, or any burns affecting more than 5 percent of the body surface.

**Type of Fire Extinguishing System:** If a fire extinguishing system was used to fight an aircraft fire, specify the type(s) of extinguishing system(s) used. Examples include handheld extinguisher, engine fire bottle, cargo/baggage compartment fire suppression system, or airport emergency ground equipment.

**Owner/Operator Information:** Enter the owner information as shown on the registration certificate. Commercial operators, enter the operator information, including "doing business as" when applicable, as shown on the operator certificate.

**Revenue Sightseeing Flight:** Indicate whether the accident aircraft was conducting **revenue** sightseeing operations under 14 CFR Part 91 at the time of the accident.

**Air Medical Flight:** Indicate whether the accident flight was being conducted for the purpose of carrying medical personnel, patient(s), or organs.

**Public Aircraft:** Federal, state or local government flight operations such as official travel, law-enforcement, low-level observation, aerial application, firefighting, search and rescue, biological or geological resource management, or aeronautical research. Indicate whether the flight was conducted by the armed forces, federal, state, or local government.

**Purpose of Flight:** 14 CFR Parts 91, 103, 133, 136, and 137: Indicate the type of operation that was being conducted at the time of the occurrence using the following definitions:

**AERIAL APPLICATION**--Operations using an aircraft to perform aerial application or dispersion of any substance. Examples include agricultural, health, forestry, cloud seeding, firefighting, insect control, etc.

**AERIAL OBSERVATION**--These flights include aerial mapping/photography, patrol, search and rescue, hunting, highway traffic advisory, ranching, surveillance, oil and mineral exploration, criminal pursuit, fish spotting, etc.

**AIR DROP**--Aerial operations, other than aerial application, that are intended to release items in flight.

**AIR RACE/SHOW**--Includes any flight operations conducted as part of an organized air race or public demonstration.

**BUSINESS**--includes all personal flying without a paid professional crew for reasons associated with furthering a business, including transportation to and from business meetings or work. This does not include corporate/executive operations, air taxi, or commuter operations.

**EXECUTIVE/CORPORATE**--Company flying with a paid, professional crew.

**FERRY**--Non-revenue flight under a special flight or "ferry" permit. Refer to 14 CFR 21.197 for details of special flight permit issuance.

**FLIGHT TEST**--Flight for the purpose of investigating the flight characteristics of an aircraft/aircraft component or evaluating an applicant for a pilot certificate or rating.

**INSTRUCTIONAL**--Flying while under the supervision of a flight instructor or receiving air carrier training. Personal proficiency flight operations and personal flight reviews, as required by federal air regulations, are excluded.

**OTHER WORK USE**--Miscellaneous flight operations conducted for compensation or hire such as construction work (not 14 CFR Part 135 operation), parachuting, aerial advertising, towing gliders, etc.

**PERSONAL**--Flying for personal reasons (excludes business transportation) including pleasure or personal transportation. This also includes practice or proficiency flights performed under flight instructor supervision and not part of an approved flight training program.

Also indicate the height above ground level and coverage of the lowest cloud ceiling present at the time of the accident/incident (reported as broken or overcast).

**NOTAMs (D and FDC), AIRMETs, SIGMETs, PIREPs:** Describe all NOTAMs (distant (D) or Flight Data Center (FDC), if known), AIRMETs, SIGMETs, and PIREPs in effect near the accident/incident.

**Flight Crewmember Information:** Indicate the category that best describes the capacity served by this flight crewmember at the time of the accident. The designators "Flight Crewmember 1" and "Flight Crewmember 2" do not refer to a specific pilot position or responsibility. If more than one pilot is aboard, they may be entered in any order and their capacity entered as appropriate.

This also includes a check airman performing official duties but does not include cabin crew. State the capacity served by each included crewmember at the time of the accident.

**Passenger(s)/Other Personnel:** Enter identification and injury severity information for all passengers, cabin crew, and other personnel involved in the accident. See Page 1 of the instructions for the official definition of injury levels.

Several questions throughout the form allow for multiple responses; when appropriate, choose all responses that apply.

**These instructions only pertain to major issue areas covered by NTSB Form 6120.1 Pilot/Operator Aircraft Accident/Incident Report. For additional definitions of questions and responses, please refer to [www.nts.gov](http://www.nts.gov).**

Plane had been taken to Don Maxwell Aviation services at East Texas Regional (KGGG) for annual inspection on 11-29-2016. On 1-4-2017 after calling and checking on the plane- Don Maxwell said the annual was finished, the plane had been test flown and was ready for pickup.

I traveled to KGGG by my truck from Cushing Texas to fly the plane back to Nacogdoches (KOCH). I arrived at about 2:40 at Don Maxwell's office, went over the invoice for the annual, discussed one item on the bill with Don Maxwell ( a part on the front landing gear). I had checked the plane and the fuel tanks were full. I asked the front desk lady and they had not charged me for the fuel, so I had to pay extra for about 32 gallons the line crew man said he put in the tanks to fill the tanks up. I checked the weather on foreflight and saw ceilings 2600 and visibility 10 miles- no precipitation-so the weather was fine for trip back to KOCH. My walk around the plane showed nothing unusual. Start up was normal. Got clearance to taxi and taxied to runway 36 -taxiing was normal, run up before take off and going over take off checklist- everything looked normal. Got clearance for take off and did normal take off about 3:30 CST- I was passed off by the tower to departure frequency and I noticed the DG was not working properly but I had the GPS and compass- So instead of returning to the airport, I decided I would let Kent Kramer aviation services at KOCH take out and send the DG to be fixed when I got back to KOCH. Don Maxwell had not mentioned the DG was a problem when he test flew the plane earlier that day.

Flight from KGGG to KOCH was going normal and I was at 2,000 feet cleared direct to KOCH by departure. After clearing KGGG airspace I diverted to Cushing to go over my ranch and flew over my property being cleared. Then I went direct to KOCH. No problems on the way- I Checked the AWOS on my way to KOCH for weather- altimeter 30.07 , overcast 3,000- visibility 10 miles and the winds about 010 at 5 knots which were favoring 36 so I entered a downwind for runway 36 at KOCH. I was at 1,500 MSL about 1 1/2 mile west parallel to the runway and at the north end of the runway in the pattern. I went through my landing checklist. I switched tanks from right to left- the left tank was the fullest tank, put the gear down- checked that the gear was down, checked mixture - all the way in, prop all the way in, seatbelts, temperatures good, flaps down 5%. Everything looked normal. When I was passing parallel to the south end of the KOCH runway, I decided to put in the ILS approach for runway 36 in my Garmin to walk the ILS approach down to the runway for practice and I would extend my downwind then turn base and walk the ILS down to the runway. I had put in the ILS frequency and noticed my altitude was about 1,000 to 1,100 MSL. The airport elevation is 343 so I was about to add power to climb when the engine stopped. No sputtering, no vibrations, just stopped. Since I was low-about 700 AGL I immediately turned to the runway which was more than 1 1/2 miles away. (Not sure how far). I went to set up best glide at about 78 knots. The prop was windmilling so I know the engine did not lock up. I checked the mixture, prop and mags and then noticed that I was descending extremely fast but my airspeed was dropping and I was only at about 65knots and the airspeed was dropping. My worry at that point was to make sure I don't stall the airplane on the way down. I had to concentrate on keeping the plane's airspeed from dropping while realizing the planes descent rate was more than I would expect. My thoughts was to fly the airplane and keep it under control. I realized I could not make the airport so I picked a field just southwest of the airfield that I thought I could make. After a few seconds I realized I could not make that field since I was going down very fast, I selected a debri field where a wooded area had been cleared recently. There was a tree line at the east end of the field and debri piles of cut wood in the field. Just before touching down, I looked at my airspeed and noticed I was at about 55 knots, then I hit one of the debri piles and the airplane entered the trees and spun around to a halt. I exited the plane as fast as I could since I know I had full tanks and the fear that the plane would catch on fire. I called 911 and the time was about 3:50PM CST. I was not injured just some soreness in my shoulder from the seatbelt harness. The plane did not catch fire but was totaled.

The time from engine out to crash was probably less than 30 seconds with no time to react.

**RECOMMENDATION (How could this accident/incident have been prevented?)**

## Operator/Owner Safety Recommendation

As all pilots post crash you realize the many things that went wrong. We don't know the actual cause of why the engine stopped but my thoughts are it is related to the switching of the fuel tanks from right to left and either a bad valve or bad fuel. One of my biggest mistakes was that I relied on another person for test flying my airplane after an annual which normally I would do the test flight before leaving the airport area. When a person tells me he did the test flight after an annual I assumed they checked everything- I made the mistaken assumption that everything worked on was checked. I should have done a better job of preflight inspection.

In switching tanks- I always thought if there was a problem it would be immediate-it looks like it may take a couple of minutes before a problem shows up after switching tanks since there is fuel in the system. I should have tested this more thoroughly.

When the engine went out my reaction time and thinking no this cannot be happening delayed me for a few seconds before I started reacting. We have to train to react quicker.

All my emergency procedures practiced was with the airplane in clean configuration- gear up, flaps up and under a calm environment and going over the emergency checklist. I had practiced this and felt I knew how the plane should glide and the range and knew the emergency checklist. Under an actual emergency- unfortunately I could not think of all the things that I needed to do- I could only think of a couple of items and those were select a place to try to land, keep the airplane from stalling and try for best glide speed. I subconsciously kept pulling back on the yoke to slow my descent rate since it was not gliding as I expected and had to force myself to push the yoke forward to keep the planes airspeed above the stall speed and concentrate on this to keep from stalling rather than realizing the cause of the extreme descent and the engine going out. The fast descent rate created additional problems as where to put the plane
