Written Statement of Accident
Aircraft Accident N712AZ
Date of Accident 1/31/2017

Departed 52F at approximately 2:40 PM on Tuesday 1/31/2017 with a fellow pilot passenger on board. Checked fuel quantities prior to departure, having approximately 10 gallons in left wing tank and 15 gallons in right wing tank. The fuel selector was turned to the right tank.

After flying for approximately 15-20 minutes, an off field landing was simulated/demonstrated over a wheat field. There was not touch down. The carb heat was turned back off, full power applied to the engine, and a steep climb out was underway due to rising terrain.

At an altitude of between 200 and 500 feet AGL the engine stopped running. Full forward elevator controls were applied in order to regain airspeed and avoid a stall. An immediate decision was made that insufficient altitude and rising terrain would prevent a turn back to the wheat field for landing.

My next thought was that the float valve in the carburetor was stuck closed and the bowl had ran out of fuel. The engine seemed to start running again just as we topped the trees, however there was not sufficient time to recover at this point.

Upon impact, my passenger expressed concern about the fuel leaking and I immediately turned the fuel selector to the off position for fear of a fire. I then exited the aircraft on the right side and turned my attention to my passenger and assisted him in exiting the aircraft. This required removal of the front seat since his foot was wedged under the seat frame due to the gear leg collapse and buckling of the fuselage and floor boards.

Once the passenger was clear of the aircraft I then turned my attention to the electrical system and disconnected the battery cable in order to eliminate any source of ignition.

I then made phone calls for assistance. According to my cell phone, the first call was made at 2:59PM a second at 3:03PM.
