Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Broken/bent right strut and wing, broken noes gear, dented spinner, bent/damaged left wingtip, left landing gear crunched, blown out windshield. Upon moving the aircraft a slight dent at the rear of the fuselage was made from placing the aircraft on the trailer.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

I (Serena Whelchel) departed KPGA at 4:00pm on April 19th, 2017. I had 55 gallons of fuel on board, 11.5 quarts of oil, and had just replenished the hydraulic oil. I was going to KFTG with an intended stop at KANK. I was going to stay in Salida for the night and early in the morning; get fuel, check the weather, and get flight following and prepare for entrance into class bravo for the remainder of the trip to KFTG.

In the first part of the flight there was slight turbulence but smoothed out mid-flight to and including arrival at KANK. There was a twenty-knot tailwind that provided a ground speed of 160-170kts for more than half of the flight. The other part of the flight, ground speed was 150kts. The first hour and thirty minutes I flew on the left tank. After which I switched to the right tank.

The air was smooth when I crossed over the low point of poncha pass. I was monitoring the awos, which reported the winds at 4 from the west. Came in on the downwind, put the gear down at 120kts. Turned base, leveled my wings, at 550feet in the traffic pattern turned final, leveled the wings and everything went quiet. There was no noise leading up to the silence. I checked the fuel selector and also tried to restart; mixture, prop, throttle, fuel pump, mags, ignition. The aircraft had immediately begun to sink out of the air.

After attempting the restart and realizing I would not make the runway I began to look for a safe and solid place to land. There were some farm fields and a road. The road would have required a low turn and at my altitude I felt it safest to use the farmers field. Sinking like a brick, I maintained wings level and tried to position my self for a touch down mid-farmers field. It was a hard landing and I also I took out a sprinkler system during the "roll out".

After coming to a complete stop, I pulled the mixture out shut off the master, and avionics master, took the keys out. The windshield had shattered and what had fallen in my lap (1 backpack, 1 headset, 1 can of hydraulic oil, 1 large chunk of windshield) I tossed out the front, removed my seat belt and also jumped out the front. I took pictures with my phone until Melissa (first on the scene) came to my side and said that emergency personal were on their way.

When the FAA and I went to the site the next day we noted that it smelt like fuel from the left side and the following day when we went to take off the wings and move the plane to KANK there was fuel leaking from the right side. We were able to drain 15 gallons from the right and around two from the left.
