Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Post-flight inspection revealed a missing tail rotor tip block associated with one tail rotor blade and damage to the tail rotor gearbox mount.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

On Tuesday, May 2, 2017, a PHI, Inc. Bell 407 departing the Boothville facility headed to an offshore location experienced an incident associated with a tail rotor blade. Approximately three (3) minutes after takeoff on the first flight of the day, the pilot heard a "pop" which was followed by a vibration he diagnosed as emanating from the tail section of the aircraft. The pilot began a descent from cruise altitude of 1,750 and headed toward a helideck that was in the immediate vicinity. After landing and reducing the rotor RPM to idle, the pilot noted an increase in vibration, at which time he secured the engine and stopped the rotor system using the aircraft's rotor brake. Post-flight inspection revealed a missing tail rotor tip cap associated with one tail rotor blade and damage to the tail rotor gearbox mount.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

PHI has notified Bell Helicopter, the manufacturer of the aircraft, and requested assistance to investigate the incident. Additionally, PHI has performed a one-time inspection of our Bell 407 fleet with emphasis on the tail rotor blade tip caps. As of now, one anomaly was identified on one tail rotor blade tip cap, which has been removed from the fleet for further investigation. We are also informing our pilot staff of the event to increase their awareness.
