Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Helicopter destroyed itself due to out of balance blades due to ground resonance.
Airframe, tail boom, tail rotor, main blades all damaged. No damage to anyone or surrounding area.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Around 1:00 pm I began preflight of helicopter at KTVR. On preflight, i missed the trim being set at almost full forward position. It was set there for cruise on the flight to KTVR. I had normal startup. Ran through checklist, after warmup, began run up for departure. At full power for takeoff, the vibration began, and continued to get worse. I rolled the throttle off and lowered the collective. Then the helicopter began to destroy itself. Because the trim was full forward the blades began hitting the stops and started the vibration. If I had centered the cyclic, it would have stopped. This was no fault of the helicopter. It was pilot error.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Buy checking the trim setting which was on the checklist I missed.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No
