Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft heavily damaged with right wing, landing gear, front cowling, cabin, empanage involved. Left wing sustained moderate damage, tail feathers very minor damage.

No other property damaged.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Purchased plane in February 2015 and as it is a trainer plane wanted to take my instruction in it.

From first flights with the plane dual (with instructor) problems were noted developing proper engine power. As such an A&P was contacted and on 5/12/15 installed Slick model 4201's to replace Slick model 4001 mags. No improvement so next the AP replaced Stromberg carb with Marvel Schebler and installed fuel mixture control, and checked the primer operation. This seemed to improve the aircraft power and therefore performance and I resumed my instruction in the aircraft getting a sport pilot certificate 4/14/2016.

On several occasions over the next 140 hours of flight time I experienced diminished engine performance but the problem resolved itself. The annual inspection September 2016 was quite thorough particularly dealing with engine and components.

The morning of 6/20/2017 I flew the Champ from Y77 (Iron River, WI) to 3N8 (Mahnomen, MN) arriving at 3N8 8.45am with no issues at all with aircraft performance, and it had been quite some time since there had been an issue...prior to Sept. annual 70 hours previous. Upon landing I fueled the plane with 100LL and hangered it there (home airport).

The evening of 6/20/2017 I returned to airport (3N8) at 7 pm with the intention of going for a short flight around the Mahnomen, Mn area to sightsee. I preflighted the plane for the second time that day, including fuel samples. Everything checked out and I climbed in and taxied to the approach area for runway 35 and there performed my runups of mags, carb heat, and final checklist items. All checked out fine and I made the decision to proceed onto runway 35 at 8 pm for takeoff.

As I advanced the throttle for takeoff all seemed fine...tail came right up and I was flying off in what seemed a normal takeoff. Experiencing trouble with building airspeed I checked the tach and noted the engine was not pulling to the full power but made the decision to continue. I now was committed to the takeoff and it seemed there was an even greater loss of power as I continued and I could not gain much altitude. (approx 150' max altitude gained). This was different than previous power issues in that it seemed to fade more and more all the time, where previously it had maintained a slightly reduced power.

Runway 35 flight path intersects with State Highway 59 a short distance from the end of the runway. As I was experiencing trouble with gaining altitude because of power issue I was uncomfortable getting out over the State Highway 59 and the overhead electric transmission lines that are on both sides. The power seemed to still be fading and I was basically "hanging on the prop" when I decided to initiate a very slight right bank (20 degrees) to ensure I would not get over the busy highway. At this point the plane stalled with what may have been total loss of thrust and I had a very hard forced landing in a soybean field adjacent to the airport.

There were Mn DOT workers on State Highway 59 who saw my accident, ran over to the plane and disconnected the harness and pulled me free from the plane in case of fire. Mahnomen County Sheriffs Dept., Mahnomen Fire Dept. and Mahnomen Hospital Ambulance responded and the FAA was notified. The wreck was secured by Mahnomen County Deputy Sheriff until FAA released it from the scene.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

1. aborting the takeoff at first sign of any kind of performance issue...with enough runway to stop plane.
2. In retrospect I would also look to keep noise cancelling turned off on the headset on takeoffs and landings. I had purchased a Bose A20 only about 10 PIC hours before the accident and it worked almost too good. Perhaps I would have reacted differently (aborted) if my ears told me the same thing as the controls and instruments referring to the increasing loss of power/thrust/lift.
