RE: N48TZ Accident
DATE: August 18, 2017

On August 17, 2017, at about 8:45am, I arrived at Louisiana Regional Airport to fly an instrument training lesson with Mike Graham. I conducted a preflight examination of the airplane. I sumped fuel from all 3 valves and the fuel was bluish in color and free of contaminants and water. The oil measured at 11 quarts.

After pre-flight, I started the engine and it cranked as it should. I checked AWOS and winds were 220@5, clear skies, and density altitude of 1500. I waited until all gauges were in the green and began to taxi to Runway 17. I conducted my normal run-up. The mags checked and the propeller cycled properly. I set the trim to takeoff, checked for full prop and full mixture. I checked the fuel selector and positioned it on the right tank.

Take-off was a normal takeoff. All gauges were in the green and we had full power. I rotated at about 75 knots and pitched to about 8 degrees to establish speed and a positive rate. Once established, I raised the gear and pitched up to 10 degrees.

Just passed the threshold at about 150 feet AGL, I noticed the plane was not climbing as normal. I lowered the nose slightly to maintain airspeed and then raised it slightly to see if it would climb again. It did not climb so I lowered it again. Mike hit the auxiliary fuel pump and lowered the gear as I checked for the proper positioning of throttle, mixture, prop, mags and fuel selector. We immediately began to scan the landscape for the safest landing spot and determined that the best course was a slight left turn. The engine seemed to have some power, but not enough to keep us flying.

Our airspeed was decreasing as we approached a power line but we did not go below 60 knots and our decent rate kept us above the power line and eventually over a fence. As we touched down, we hit a "swell" in the landscape that acted as a ramp that sent us back into the air. The plane came back down in a nose down attitude and the nose gear struck ground. I immediately hit the brakes to avoid going into the highway or hitting the approaching cranes. The plane remained nose down and began to skid across the landscape with a slight right turn.

When the plane stopped, we pulled the throttle, mixture, and prop, turned off the master and magnetos and quickly ran away from the plane. A local resident said he heard the engine and knew we were in trouble. He asked his wife to call 911 and he began running towards us to see if we needed help. I then called Janet Gonzales at Louisiana Regional Airport so that she can alert the proper agencies.
