Pilot's Statement re August 24, 2017 N61LR Accident

Departed M12 for KDRP on August 24th at 7:45AM. Temperature was 74 degrees. Clear skies. Flight to KDRP was uneventful. Departed KDRP for M12. After passing Marked Tree, I noticed one cylinder temperature beginning to rise above normal. I throttled back and temperature began to fall. OAT was 75 degrees. Approximately 10 miles SW of Manila, temperature rose to 340 degrees. A loud bang occurred and the plane shuddered heavily. I pulled the power and began looking for a place to land. Altitude was approximately 1200 feet. I chose a turn row, circled to land, and noticed power lines on approach and pivot system on the other end. Turn row was N/S orientation. Turned W to a smaller turn row and landed. The turn row ended into bedded soybeans. The beds were perpendicular to the path of the plane. I skipped across the top of the beds as I attempted to align parallel with the rows. Eventually I could not hold the nose wheel up and it dropped into furrow and collapsed. I shut off master and my daughter and I exited the plane.
