

Communication Summary

September 13, 2017

Information from: Patrick Hammer, DOO Freight Runners

Summary & Factual Information: Mr. Hammer was asked if the flight crew was drug tested after the accident and he, in part, reported: We did not due to the fact that 120.109(c) only requires it if "that employee's performance either contributed to an accident or cannot be completely discounted as a contributing factor to the accident."

Alcohol test was not conducted due to the fact that 120.217(b) only requires it if "that employee's performance of a safety-sensitive function either contributed to the accident or cannot be completely discounted as a contributing factor to the accident."

We determined that none of the flight crew's performance contributed to the accident and could be completely discounted as a contributing factor.

I can attest that the above summary is correct to the best of my knowledge:

Edward F. Malinowski
National Transportation Safety Board
Air Safety Investigator
