Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Coupling between output of transmission drive shaft to tail rotor drive shaft - sheared
Tail boom - small dents and a couple of small holes
Tail rotor - one blade bent from ground contact
Tail rotor guard - broke completely off the aircraft

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was providing dual instruction to a Certificated pilot who was not helicopter rated. We were located southwest of the FBO over a grassy area, north of the runway. The "student" had the controls. Approx 10mins into the flight, while holding a 3 to 5ft hover and facing south, the "student" began to lose control; which included a right spin. At this time, I did not suspect a tail rotor failure. After the "student" could not return to a stabilized hover, I took the controls. After I took the controls, I realized the aircraft was not responding to cyclic inputs and left pedal input. At this point, I assumed I had lost thrust from the tail rotor. I rolled throttle off (left pedal still applied), the aircraft settled, and made a hard landing facing east. The aircraft stayed upright, on it's skids, and with the engine running. I believe the "student" pulled the mixture cut-off; which stopped the engine.

I asked the "student" if he was injured; which he stated he was not. I advised him I wasn't injured. I exited the aircraft while the main rotor was still spinning. I observed the tail rotor and tail rotor drive shaft were not spinning. I could hear a grinding noise near the connection of the transmission output shaft and the tail rotor drive shaft. After the main rotor stopped spinning, I found the tail rotor guard had broken off the aircraft and was laying approx 20ft away. I do not know when the tail rotor guard struck the ground. I also observed minor damage to the left side of the tailboom and one of the tail rotor blades was bent.

The aircraft was towed back to the hangar and was inspected by an on-field mechanic.
