Description of Damage to Aircraft and Other Property <i>(Use additional sheet if necessary)</i> Both wingtips crumpled, nose gear collapse and separation, separation of right wheel and right strut, bent left wheel strut, one side of propeller shaved off halfway down, other side bent backwards, struck and was stuck inside cowling on right side (pilot perspective).		
NARRATIVE HISTORY OF FLIGHT <i>(Please type or print in ink)</i>		
Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.		
The aircraft departed KFTG at approx. 1845 LCL, VFR with destination of KFMM. Pilot 1 (left-seat, Pilot Flying (PF)) simulated IMC while Pilot 2 (right seat, Pilot not flying (PNF)) acted as PIC and safety pilot. An RNAV 14 practice approach at KFMM was completed, with Pilot 1 at the controls, resulting in a go-around (19:20 LCL) due to the instability of the approach, mainly airspeed with runway length-remaining decreasing. As planned, the flight departed KFMM, continuing to KGXY. At approx 19:45 LCL, the KGXY AWOS reported winds 130 degrees at 05 knots, and Pilot 1 (PF) & 2 (PNF) agreed to enter midfield, left downwind for approach to runway 17 at KGXY for a full stop landing. Upon reaching KGXY to enter the traffic pattern, Pilot 1 ceased to simulate IMC and proceeded visually. There was no traffic in the vicinity and position reports to the untowered field were made. A 10 degree flap setting was initiated by Pilot 1 somewhere in the pattern at approx. 80-90KIAS. High on the approach, according to the two white PAPI lights, and with excess airspeed, Pilot 1 declined to extend flaps further to 20 degrees. The aircraft crossed the threshold to runway 17 at approx. 50 feet and 80-85 KIAS. The aircraft was flown a further ~3000 feet down the runway, bleeding airspeed. A flare was begun higher, Pilot 2 remarked "We are still a bit high and slow, nose down a little". The aircraft stalled from approx. 6 feet, dropping to the runway centerline and bounced dramatically. Pilot 1 initiated a go-around with full throttle, in a nose high attitude. Pilot 2 (PNF) reacted to nose high attitude and slow airspeed with momentary slight downward pressure with left palm to the control yoke as Pilot 1 moved control further yoke aft to climb, in a nose high attitude of not less than approx. 8 degrees. The aircraft reached a height of approx. 15ft AGL. The aircraft then began a hard yaw to the left. Yawing approx. 50-60 degrees to the left, with full power on and a flap setting at 10 degrees, the plane then stalled, with the left wingtip impacting the ground just left of the runway in the grass, then the right wing following. The plane was spun back to a direction of approx. 170 degrees magnetic, parallel to runway 17, and impacted the ground, shearing off the fixed tricycle landing gear and the prop curling. The aircraft came to a rest approx. 20 feet left of runway 17, and approx. 100 feet before the 6000 feet of runway remaining indicator sign. The front wheel was separated from the broken nose strut and was found to lie approx. halfway between the aircraft and the runway. The aircraft's engine was halted, the occupants exited out of pilot side door (left side). The right side door was blocked as the aircraft leaned to its right side. There was no fire, and no sounding of the ELT. A bystander in a field on a road in a field due west of the impact, spotted the accident, scaled the airport fence and began an immediate phone call to emergency services. Both occupants were unhurt, and police and fire rescue arrived approx. 15-20 minutes later.		

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

This accident could have been prevented by a prompt execution of a go-around procedure much earlier in the landing phase, with appropriate pitch attitude to maintain appropriate climb airspeed as well as proper coordination to counteract the leftward yawing of the airplane.
