Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Aircraft was substantially damaged, nose gear collapsed back into cowling. Fuselage, tail were severely damaged.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

Flight was planned with CFI for BFR. Aircraft was preflighted and found to be air worthy. Runway 210 was used as it favored the wind. The turf was damp + soft but very usable. Engine was run up to 1500 RPM. Magneto and carb heat were checked and found to be within limits. Take off roll commenced. Aircraft seemed to be slow to accelerate. Yoke was eased back to raise nosewheel. Plane felt sluggish. CFI took controls, finished the roll and plane lifted off. I checked to make sure the throttle, carb heat + mixture controls were all set correctly. I indicated to the CFI that the engine was only turning 1900 RPM. Plane was nearing stall as we remained in ground effect. An off field landing was attempted. Touched down on all gear. Nose wheel collapsed and the plane inverted. We released our seat belts and exited the aircraft. Eric was bleeding, I had no injury. Eric contacted FAA + NTSB immediately.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Take off should have been aborted when aircraft was not accelerating

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Engine did not produce full power.
