Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Engine cowling broken, forward exhaust pipes bent, prop strike and destroyed, sudden stop of the engine, top wing fabric scraped, vertical stabilizer top scraped.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was hired to deliver this aircraft to its new owner. The seller warned me prior to the flight that the brakes were sensitive and the right brake was a little "mushy," but still effective. I had a chance to taxi the aircraft around for a good while and get a feel for where to position my feet for safe operation and the brakes works fairly normal in my opinion. I had no issue during taxi, run-up, or take-off. Prior to my flight that morning my plan was to make it back to my home airport (KHUF) with fuel stops in between. I departed Hartford, WI (KHXF) at 0845 CDT. My original first destination was Morris-Washburn (C09) and Delkalb Taylor (KDKB) was my fly over point to avoid the Class B airspace. I was getting cold, being that it is an open cockpit aircraft, and decided to take a break. I had reviewed the weather for the whole route including DKB and decided to set down to get some fuel and warm up for the next leg. Upon my arrival to DKB, I was not equip with a radio so I scanned thoroughly for traffic and entered the left downwind for Runway 2 because of my knowledge of the winds during my preflight. I reviewed the windsock to back up my previous preflight weather which was about 3-4 knots around 350-360 degrees. I executed a standard traffic pattern and descended for the runway. The detail oriented person that I am and especially flying an unfamiliar aircraft, I heeded warning to the sellers comments about the brakes and made sure to place my feet in the appropriate place to execute a successful landing. I would not have proceeded with the landing if I had any doubts about my foot placement. I executed a 3-point landing and the power was at idle for landing. It was a very smooth touch down and continued straight for about 300-400 feet. I held the stick back and all of the sudden the aircraft started veering to the left about 30 degree angle from the center line of the runway. I was applying right rudder and was not getting any response. I was about 10 feet from the edge of the runway when it finally responded to my right rudder input and the aircraft began going straight again. To reassure my point before, my feet were still on the pedals, not the brakes and by no means was I trying to get stopped by certain taxiway. The aircraft was under control the whole time and I was simply trying to put a control input to straighten the aircraft parallel to the center line of the runway. About 20-30 feet after the airplane started going back straight, it was as if someone slammed on the brakes on and before I could blink I was up on the nose and then upside down. During all of this I still had the stick full aft. The first thought through my head once upside down was "I need to get out." I released the 4 point harness and crawled from the wreckage and stood my distance after noticing fuel dumping out of the header tank. My evacuation time was about 3-5 seconds.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

A proper check out and more time in type.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Brake malfunction possible frozen moisture in the lines due to the temperature being -3 degrees Celsius at the time of landing and something that cannot be troubleshooted.
