Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Spinner, propeller, engine cowl, L gear leg, L rear strut, L wing and bottom of forward fuselage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

During a routine instructional flight with a privat pilot rated tail wheel student a hard landing happened on an attempt to land in a level attitude. A distinct snapping sound was heard on touchdown and I took over controls, added power to compensate for the bounced landing and landed the aircraft a little further down the runway. On this landing the plane was slowed down and set down gently but the left landing gear leg would not support weight and rotated up and aft. Directional control was compromised with the left wheel pushing against the left rear wing strut. The aircraft slid to the left, on its nose and left wing and departed the runway a little past taxi way A2. Upon inspection of the landing gear the thru-bolt that holds the gear leg appeared had sheared.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Gear bolt inspection and scheduled replacement as recommended in Bellanca service letter C-135 12/13/1978

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Gear thru-bolt sheared. (bolt was given to FAA inspector to be forwarded to NTSB for evaluation)
