Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and and location, services obtained, and intended destination. Provide as much detail as possible.

See Attached

RECOMMENDATION (How would this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Conducted a better clearing turn to ensure that nothing was ground to include animals/Birds.

Maintain more forward airspeed incase of emergency.

MECHANICAL MALFUNCTION/FAILURE (If not stated, checked, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

I dont know if there was a mechanical problem. There is a possibility.

January 9, 2018

To Whom It May Concern,

This letter is in reference to the events and actions that took place on January 8, 2018.

My day started at 0700 when I left the house and arrived at my local hangar. I began preflight and preparations for my cattle operations that day. The preflight showed no abnormalities and the weather was clear of clouds, 10 miles visibility for the time of flight, and winds calm.

I took off at 0730 for my first round of flights. The operation for the day was to locate and move my personal cattle for cattle operations. After successfully moving the majority of my cattle to the pens I landed at the pens and shutdown at 0920 in order to treat the cattle in the pens. I received a phone call from a friend stating that I had a few head of cows out near his house, so I launched once again to find them. I took off at around 1310 from the pens to find the cows.

After finding the cows and successfully moving a few to some nearby by pens, I was in the process of looking for the last one, when I began to enter an OGE hover. At approximately 1340, at the top end of the OGE hover (approximately 50 ft) just as I applied power to stabilize the hover I heard a single loud bang and felt it in the pedals. The aircraft began to spin to the right, I applied full left pedal and realized that the pedals had zero effect. After about 2 Spins I entered a hovering autorotation IOT remove the torque from the rotor system to stop the spin in accordance with the Pilots Manual. During the decent I felt the aircraft contact the trees below and my main goal during that time was to maintain the aircraft level and set down skids flat. Once the aircraft was down I pulled the mixture control to kill the engine and I began my self-assessment. I concluded that I was okay, and I turned of my ELT and began making phone Calls.

I talked to the NTSB and they gave me permission to move the aircraft back to my Hangar and wait for the FAA. The aircraft was successfully moved back to the Hangar by 1640.

If there are any questions, feel free to call me at [REDACTED] or email at [REDACTED]

Sincerely,

[REDACTED]
