

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Angleton State: TX

ZIP: 77515 Country: USA

Latitude: 29-06.5183N Longitude: 095-27.7250W

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 12/20/2017 Local Time: 3:30 pm

mm/dd/yyyy

Time Zone: CST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N47FP

Manufacturer: Piper

Model: PA-12

Serial Number: 12-2741

Year of Manufacture: 1947

Amateur-Built: ☐ Yes ☒ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

- ☐ IFR-Equipped and Certified
☐ Commercial Space Flight
☐ Unmanned Aircraft

Maximum Gross Weight: 1935 lbs

Weight at Time of Accident/Incident: 1758 lbs

Number of Seats: 3 Flight Crew Seats: 1

Cabin Crew Seats: 0 Passenger Seats: 2

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
☐ Balloon
☐ Blimp/Dirigible
☐ Glider
☐ Gyroplane
☐ Helicopter
☐ Powered Lift
☐ Rocket
☐ Ultralight
☐ Unknown

Type of Airworthiness Certificate

(Check all that apply)

- Standard**
☒ Normal
☐ Aerobatic
☐ Balloon
☐ Commuter
☐ Transport
☐ Utility
- Special**
☐ Restricted
☐ Limited
☐ Provisional
☐ Special Flight
☐ Experimental
☐ Special Light-Sport
☐ Experimental Light-Sport

- ☐ Certificate of Authorization or Waiver (COA)
☐ None ☐ Unknown

Landing Gear

(Check all that apply)

- ☐ Retractable
☐ Tricycle ☒ Tailwheel
☐ Amphibian ☐ High Skid
☐ Emergency Float ☐ Skid
☐ Float ☐ Ski
☐ Hull ☐ Ski/Wheel
☐ Other Launch/Recovery System
☐ None ☐ Unknown

Engine Type (Select one)

- ☒ Reciprocating ☐ Liquid Rocket
☐ Turbo Shaft ☐ Solid Rocket
☐ Turbo Prop ☐ Hybrid Rocket
☐ Turbo Jet ☐ None
☐ Turbo Fan ☐ Unknown
☐ Electric

Fuel System Type (Reciprocating)

- ☒ Carburetor ☐ Fuel-Injected

Engine	Engine Manufacturer	Engine Model/Series	Manufacturer's Serial Number	Date of Mfg. mm/dd/yyyy	Rated Power ☒ Horsepower or ☐ lbs of Thrust	Total Time (hours)	Time Since: Inspection (hours)	Overhaul (hours)

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Aircraft

- damage to leading edge of the left wing & left wing strut
- damage to right wing strut

- damage to bottom right portion of the fuselage

- damage to one end of the propeller

Property

- damage to 2 PAPI lights on the North end of the airfield

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

See attached

NTSB Form 6120.1 Narrative History of Flight

The day began with a flight from Dry Creek (TS07- the aircraft home base) to Texas Gulf Coast Regional (KLBX). It was a beautiful day – in fact by far the nicest day of the week. I felt great and was well rested. Shortly after I woke up, I checked the radar, TAF, and local ASOS for both David Wayne Hooks (KDWH – closest available one-minute weather to TS07) and KLBX. They indicated an excellent flying day with no weather threats. A brief of those airports on Air-Nav, in addition to Flyin' Tiger (81D – this was a planned intermediate stop later in the day) showed no applicable threats. Upon arrival at TS07, I pulled the aircraft out of the hangar, conducted a thorough "1st flight of the day" preflight, and departed for KLBX. I then met my passenger at The Runway Café for lunch, and he and I thoroughly enjoyed watching aircraft and discussing aviation. He had very little knowledge of general aviation and was anxious and excited to go flying. After lunch, we proceeded out to the aircraft. I had instructed the FBO to top off the tanks so therefore I again checked the fuel, conducted another walk around, and then conducted a safety briefing with my passenger. I assisted him in before I entered the aircraft. Another quick check of ASOS yielded no relevant changes to the weather. I reviewed our plan with my passenger: Depart KLBX VFR – sight see out to the east/north of the airport, review some fundamentals of flight with him and let him fly for a bit, proceed to 81D for a stop - taxi back – and go, and then a touch and go or two at KLBX followed by a full stop landing. I pointed out the relevant areas on the VFR Sectional Chart so he was familiar as well. We then started the aircraft, taxied out, and departed at approximately 2:12 pm CST. We flew our plan and after a little over an hour were back in the pattern at KLBX. I had planned one touch and go followed by a full stop landing. The ASOS reported the surface winds at 220/6, so I conducted a visual pattern and approach to runway 17 as this would yield approximately a 5 knot crosswind component. I conducted a wheel landing and touched down on speed, on centerline, in the touch-down zone, and on the upwind (right) wheel. After I lowered the left wheel, the aircraft immediately and uncontrollably veered sharply to the left (downwind). I applied full right rudder and immediately held the stick full right and aft to keep the aircraft from ground looping or cartwheeling. I was unable to regain directional control of the aircraft and we departed the runway to the left and proceeded to impact two of the four Precision Approach Path Indicator (PAPI) lights for Rwy 17. The prop hit a PAPI light causing the engine to stop. The aircraft continued and came to a stop approximately 50 to 100 ft off the runway (verified by supporting pictures available upon request). There were no injuries to myself (PIC) or my passenger. I proceeded to secure the aircraft, exited the aircraft and assisted my passenger out, and surveyed the scene. I immediately suspected that a brake had somehow locked on the left main wheel. This is supported by marks on the runway and grass as well as wear marks on the left tire.

RECOMMENDATION (How could this accident/incident have been prevented?)

NTSB Form 6120.1 Recommendation

After initial investigation by the FAA and an A&P/IA, it appears nothing is chronically wrong with the left brake. This would lead me to believe that the brake was somehow activated on landing. Knowing that my feet were nowhere near the brakes (I was planning a touch and go), I'm led to believe that my passenger inadvertently had his foot on the brake pedal.

I thoroughly briefed my passenger prior to flight, as I do on every flight. I even go into more detail with "non-pilots". This includes the basic operation of the flight controls and where they are, safety harness, headset use, how to get in and out, a plan for the flight, basic emergency procedures, etc. I continuously keep my passenger(s) updated during non-critical phases of flight.

Regardless of how conscientious we are, I'm reminded that the inevitability of human error is ever present. As we were nearing the accident airport, my passenger had stated he was a little hot and seemed slightly anxious to be back on the ground. This led me to plan a full stop after one touch and go. After later questioning my passenger, he simply wasn't sure where his feet were at the time of the accident.

This accident completely caught me off guard as the effect the braking action had on our loss of control was immense. As a Captain/Instructor/Evaluator for a Part 121 airline, I'm very involved in Crew Resource Management (CRM) and Threat and Error Management (TEM). I am extremely lucky that this didn't end worse. Therefore - if I could do anything to help prevent an accident of this nature from happening again, I absolutely want to. I'd be happy to tell my story thru the FAA Wings Program or via EAA Safety Forums. I'm very much up for any other ideas as well, including working with aircraft manufacturers for re-design possibilities or creation of applicable safety mechanisms. I'm open to any guidance the NTSB has. I don't want this to happen again!
