Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Substantial damage to fuselage, both wings
Landing gear, engine and prop

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Flight was planned as a local area flight, as a informational/orientation flight for my son who Turns 16 in April and has discussed working on his private rating this summer.

Before flight, I taxied to the FBO and purchased fuel. I took off with fuel selector set to left main tank. Left tank and right tank were both full, Aux tank was 3/4 full. I took off at approximately 3:55pm from KLMO, headed north, operated southwest to southeast of KFNL. Looked for and pointed out traffic. I had my son observe pitch attitude in level flight and in turns. Then after clearing, I practiced 'S' turns and turns around a point.

Returning to KLMO, I selected the right fuel tank, entered pattern for 29 on an extended crosswind. There were approximately four other airplanes in the pattern. I did one normal full flap touch and go, It was uneventful.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

NONE

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

on the second pattern I extended upwind and delayed the crosswind to allow an aircraft just ahead of me on the crosswind to enter the pattern.

Second Touch and go was also planned as a normal full flap touch and go and was executed uneventfully until the takeoff segment. I retracted the landing gear with approx. 500 feet of runway remaining. Approximately 3 seconds later I heard and felt engine roughness. I quickly looked at all instruments and saw nothing unusual. I glanced over my shoulder to determine, what, if any were the options I might have if I maintained partial power. Then I felt a total loss of thrust and knew I had no option behind me. At that moment I was Vx at 85 mph, and maybe 300 ft. I lowered the nose (it took a lot) to preserve airspeed. I had time to make one radio call and then attempt the best off-field landing I could manage. In the flare, I was able to arrest much, but not all, of the sink rate and had a very ~~firm~~ firm touch down. Terrain was a grass pasture. I landed on a 310 heading. There was no wreckage distribution to speak of.

I HEREBY CERTIFY THAT THE ABOVE INFORMATION IS COMPLETE AND ACCURATE TO THE BEST OF MY KNOWLEDGE
