Date Report Received

I departed Austin on a VFR flight plan on Thursday morning March 8th around 10:30 with one passenger and climbed to 9500 feet MSL enroute to Dallas Love Field. I remained in positive control, and once leveled off at altitude, went to switch fuel tanks from the right wing to the left (to maintain balance). I immediately noticed a change in the sound of the engine and a decline in fuel flow. I then immediately switched back to the right fuel tank, but it did not appear to correct the problem. I also switched on the auxiliary fuel pump, but no improvement. I then notified Gray approach that we had an issue with the engine and began a descent into the Temple airport (KTPL). During descent the engine continued to maintain manifold pressure, but as I set up for final approach I noticed that we were bleeding airspeed to rapidly. At this point, upon advancing the throttle, I got no response. I then advanced it full forward and still got no response. The engine was still running but was not generating meaningful thrust. As soon as I realized I could not make KTPL, I shifted my focus to the off-airport landing site I had identified and prepared my occupant for the off airport landing. I did my best to align with the freshly plowed furrows and flew the aircraft to the ground without stalling it. Once the aircraft came to rest we immediately shut off electrical power and evacuated the aircraft. My passenger was uninjured, and I sustained some minor compression fractures.
