(PIC) Accident Report

On April 25, 2018 at approximately 1700 (CDT), I Shelton Blue was in command of N89904. It started out as a normal flight, which means, meeting fuel requirements, pre-flight planning, weather and runway requirements. This flight was for training purposes and was originally planned from (KCMD)-> (GAD)-> (LGC)-> (KAUO)-> (KCMD). Upon departing (KCMD) I climbed to an altitude of 3,500 MSL-2,500 AGL, which was the maximum altitude I could obtain and still comply with VFR Hemispherical rules. Initially into cruise phase, I got established on a radial towards (GAD) and then I decided to lean the mixture for best fuel burn, which is critical in a C-152 on a 3 hour cross country with 4 hours of fuel on board. During this time the engine quit, so first I configured the aircraft for best glide speed. After that I chose an appropriate landing spot and went through the emergency check, which included the avionics, master, fuel valve, mixture, and the primer. While troubleshooting, the engine was trying

to restart, but I never regained full power. I looked up and I was 600-700ft AGL at stall speed with the warning horn sounding. At this point until touchdown, I focused ardently on landing the aircraft in the empty field ahead. Upon touchdown of the main wheels, I quickly applied the brakes to stop short as possible because of the uneven terrain, which caused the aircraft to flip over. After the aircraft came to a halt and recuperating my composure, I turned the magnetos off and crawled out of the aircraft. Shortly after the accident, the local authorities showed up and made necessary inspections. They also contacted the appropriate persons and when the paramedics arrived, I was transported to the Cullman Regional Hospital. At nearly 9:00pm, I was released after being treated by the medical staff.
