Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Damage to both MR blades, bent. Mast Cowling bent. Both front wind screens have missing chunks. Horizontal stabilizer crunched in. Tail boom pulled from fan cover mounting bolts. Front Right door frame & ceiling bent in.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Pilot #1 was operating the helicopter for approximately 3 hours with two other company trainees.

At approximately 1100 L, Pilot #1 landed the helicopter at position 80 number ①.

Pilot #2 got into the front R. seat & for approximately 2 min, Pilot #1 explained the carburetor & assist functions of it.

Pilot #2 had all controls & pulled helicopter into a hover.

After scanning gages, Pilot #2 hovered from position 36 #① to position #②. Hovering @ approximately 5' AGL.

After clearing all movement areas, Pilot #2 hovered the helicopter from position #② to position #③. Between position #① and #②, the helicopter was operated at approximately 5' AGL. Between #② and #③, Pilot #2 increased the helicopters altitude to ~10' AGL when leaving position #② towards #③ in order to clear obstacles & ensure skid clearance.

Prior to reaching position #③, pilot #2 began to descend the helicopter from 10' AGL to 5' AGL.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Unknown what part, but I believe it was something involved with the engine. The issue was first identified with a large increase in lateral vibrations & a hard nose left yaw, which indicated a loss of power. After everything settled, the engine was not running either.

ADDITIONAL INFORMATION (Please type or print in ink)

Use this space if additional space is needed for any answers.

When the helicopter neared position #③, and at a height of approximately 5' AGL.

I noticed a lateral vibration that quickly became more violent. Pilot #1 immediately took all controls, however Pilot #2's right foot remained on the right pedal.

The helicopter yawed to the left (nose left) approximately 30° to 40° very quickly. I, Pilot #2, input right pedal, attempting to keep the nose inline with our ground track.

The Low Rotor Warning Horn & Light came on almost immediately. There were two other lights that came on, but the console shook so heavily, that I was unable to read them.

The right skid contacted the ground first & bounced. The right skid contacted the ground again & stuck ^{creating} ~~causing~~ a hinge point.

After the right skid touched the ground, we got into a dynamic rollover. We had momentum (walking pace).

Time seemed to stop when the skid touched the ground. I felt the blades contact the ground, which threw Pilot #1 out of his seat & belt into mine.

When everything stopped, our headsets were thrown off & I asked if Pilot #1 was OK.

By: Kyle Leon Brinkman

After I asked if Pilot #1 was "OK." He said "yes." Pilot #1 said "Lets turn everything off & get out."

I remember the cockpit being Quiet and I do not believe the engine was still running.

Pilot #2 pulled "mixture OFF" & checked "Throttle OFF".

Pilot #1 turned "Master OFF" & "FUEL Shut off Valve OFF".

I, Pilot #2, opened the front left door from the right seat & Pilot #1 was able to exit safely. I undid my seat/safety belt, which was difficult because of a level of confusion/shock, & Exited the helicopter.

After exiting, we checked for FIRE & called Mark FREY for help.

During a quick Look @ the helicopter afterwards, I noticed blue oil leaking from the Main Rotor Gear box & ATF leaking from the blade spindle bearing housings.

The driveline Sissor was snapped & so was one of the Pitch links.

My (Pilot #2) door frame was dented in & wind screen was broken.

I could not see any obvious damage to the engine because of aircraft cowling. ///END OF STATEMENT///
