Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Fire in Right wing outside of engine just inside tip.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I was cleared to depart runway 31 on an IFR flight plan. I started the climb out and was approx. 200' above the runway. Just before I reached for the landing gear lever I heard a loud "boom" and I looked out my window and saw the right wing (top part and between the engine and tip) crinkled. I called to tower and said that I think I have a bird strike and I need to land. Tower cleared me to make left traffic for landing. I started the turn to the left and looked again to check on my right wing and I could see flames coming out of the trailing edge of the wing. I called to tower that I had a fire and shut off the right fuel selector as I was turning back to the right to land on runway 13. Half way through the turn I had the right engine feathered and mixture cut off. I landed on runway 13. After I got the airplane moved to the shoulder of the runway and stopped, I rushed to shut everything down and get out of the airplane. The fire in the wing was still going when I exited the airplane.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Because the cause of the fire is unknown, the solution or answer to this question is unknown.
