Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Prop Strike. Major damage to wings and tail when aircraft rolled upside down.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

I entered the pattern by crossing over midfield and circling into the downwind leg, turn base, then final. Approach was very stable. I don't remember any wind gusts. I landed just after the threshold by putting my main gear down first and then lowering the nosewheel. I started to ground roll then right about the 1000' markers on the runway the aircraft started pulling to the left like a tire had blown, wheel was binding, or brake was engaged. I tried to correct it by applying the right brake but the aircraft did not respond to me locking up the right wheel. The aircraft went off the runway after the 1000' markers somewhere and when it exited the runway the prop struck the ground twice and the aircraft rolled over the nose. I was then upside down so I unlocked my seat belt, turned off the master switch and the mags, shut off power and mixture and exited the co-pilot side door. The aircraft was intact, but flipped upside down.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I'm not sure. I've been over this a thousand times in my head. I only thought is that I might have been able to apply power and lift off again and reattempt the landing to see if the problem would resolve, but the situation happened so fast I didn't even think about it.
