

FAA Helicopter Accident Report 7/24/18

The helicopter was being annualed for 2018 and test flown to return to service.

I taxied to the end of the runway. I did a run up which was normal and all instruments read normal.

The engine shut down at approximately 50 feet and sat down in a bean field at the end of the runway.

The helicopter had not been flown since my knee operation in 2014.

Attached are the last two pages of the logbook and 4 years of helicopter inspections.
