

To Whom it May Concern,

On August 5th, 2018 at approximately 9:00am, Richard Wollert stopped in and said he needed fuel. He asked me to top it off. I fueled his Citabria N90990 with 33.1 gallons of 100LL. While I was fueling we had a short conversation and he was coherent and alert with no signs of any issues. I fueled it and 10 minutes later he took off. The plane sounded fine and gave no indication of any problems. He did not take a fuel sample that I saw. I was returning the fuel truck to its parking spot so I can't say with certainty that he did or did not do a walk around or take a fuel sample.
