Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The aircraft is destroyed after flipping over on its back. No property damage.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The preflight and engine runup was normal. The plan was to remain in the traffic pattern for landings. The takeoff roll from KAFF about 1100 lcl was normal with 2800 rpm and 14 gal/hr fuel flow. The rotation was executed at 60 mph out of the ground effect to about 100 feet with the nose on the horizon. At that point the airplane would not climb and the airspeed was slowing. The fuel flow and rpm were still normal. I lowered flaps to 10 degrees and lowered the nose hold 55-60 mph. hoping that the ground effect would enable a speed increase. I made a slight 10 degree bank angle right turn to avoid the nearest tree line. The airplane landed on the main wheels and then the airplane flipped when the nose wheel hit the ground.

We turned off the master switch and exited through the passenger side as the pilot's door was jammed.

We discovered that the ground was not as level as I thought it would be. The nose wheel had separated and just about every portion of the plane had been damaged. The fire trucks and medical team arrived and determined that there was not a fire hazard and we did not need medical attention. I surprised how uneven the ground was as it looked very level from previous flights.
