Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

Aircraft front landing gear broke off. Propeller bent. Engine Cowling damaged. Aircraft flipped upside down crushing the vertical stabilizer.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Myself and a passenger, Tom Printz, departed New Phillidelphia Ohio, Clever Field (PHD) Sunday Aug. 26th. In my preparations for the flight, I checked weather, conducted a preflight walk around and prepared for departure to my home base of Urbana Ohio I74. There was nothing out of the ordinary was found with the preflight. The Fuel was approximately 55 gallons and the oil was 1 quart below the max. The fuel looked fine without contaminates.

Tom Printz was with me and the only passenger. I conducted a run up on the taxi way at the end of Runway 15. There was no issue with the engine during the run up. We departed VFR with no flight plan and no radar service. I used the GPS to establish a direct path to the Urbana airport (I74) and climbed to 2500MSL. After reaching cruise at 2500ft. I noticed the fuel reminder timer that I have set for recurring every 20 minutes to remind me to switch fuel went off. I resent the timer and thought that it was too early to swith tanks. I noted rain to the left but would be no issue. The clouds were above us at about 3500 MSL. There was a slight headwind of 7 knots. The GPS said we had 44 minutes total time in flight.

I wanted to catch up to the B25 which was ahead of us to get pictures. I ran a high power setting to catch up to the B25. About half way through the trip the engine made a belch sound but it was not very loud. The engine lost power and came back briefly the went completely quiet. I trimmed for best glide and made a call to Columbus approach on 118.42 but I could not hear them. I also put in 7700. There was really not time to do anything else. I found a suitable field close to a road but away from power lines and fence rows. I put the gear down and flaps full down once I was close to the field. I flared at the top of the corn as best I could. The aircraft flipped over and we landed upside down. I turned of the master and fuel and we both exited the aircraft through the main door.

After thinking about what happened I probabaly ran the right tank out of fuel. I know that I took off from PHD with approximately 55 gallons total. Each tank I believe had 27 gallons. Under normal cruise I plan 18 to 20 gals per hour. At a 40minute enroute flight, this means that I could have made this trip even without switching tanks. However, in this case, the flight was low and I used a much higher power setting. The power setting that I used was at leaset 31" and 2500 RPM's. This would have substantially increased the fuel burn but I did not look at the fuel burn on the EDM. As mentioned above, I remember resetting the recurring 20 minute fuel management reminder timer that I have programmed in the GPS after takeoff. The reason for this reminder timer is that the fuel has to be switched back and forth from each tank for proper fuel balance. I also remember that at that same time that I reset the reminder I thought that I did not need to switch tanks since the climb was so short. This would have reset the timer for another 20 minutes and I don't remember the timer going off again before the event. Therefore, if I failed to switch fuel tanks it is completely possible that I ran the right tank out of fuel considering the high burn rate.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

I do not like the Left, Right, Off Fuel selector for that Year and model of 210. I was looking for a mod that would convert the value to later models of 210 which have Left, Right, Both. The Left, Right, Off selectors requires constant remembering for fuel management. That is why I had a recurring timer for proper fuel tank balance.

I am certainly not placing blame anywhere else. I am the one that made the mistake.
