(OFFICER'S NAME)

AT MILTON CARLISE RD

(LOCATION)

X saw aircraft take off from 3040 on RWY 27, aircraft barely cleared ~~the~~ fence engine did not sound like it was making full power, aircraft did not get 200-100 feet in the air, aircraft was heading towards trees west of air port aircraft made 90° turn, I believed the aircraft was going to land in the nursery. Myself & friend hopped in my truck to go find aircraft, upon arrival at aircraft was substantially damaged, pilot was lying under RH wing, awake and moving, location on left side of fence. I made sure the mag switch was off and master switch was off. Both were off. I closed the RH fuel valve & off LH fuel valve was off. Upon deputies direction he unmetal the battery disconnected, removed capilot seat to disconnect battery.

Also upon arrival fuel was leaking from the engine compartment, no fire.
