

RECORD OF CONVERSATION

Jason Aguilera
Air Safety Investigator
Central Region

Date: February 13, 2020
Person Contacted: Clay Wright
NTSB Accident Number: CEN19FA332

Narrative:

The land owner closest to the accident site recalled the following details concerning the weather that night:

The fog was incredibly dense and was quite high from the ground up to at least 1,000 feet. His residence is about 1,400 feet mean sea level (msl) and the high point across the valley goes up to about 1,800 ft msl. It's easy to get a sense of the elevation as the fog subsided, it was clear that young man had driven into extremely dense fog. The fog didn't lift for about ½ hour. The weather reported that it was clear. At our location, it was not. It was difficult to see our house at 400 ft away.
