Hi Ed,

The short answer is that no, I did not find anything definitive. My belief is that something in the master cylinder caused the brake to lock, but the inspection of the master cylinder didn't show anything. The brake lines and wheel cylinder also checked out good with no evidence of blockage, kinks, bends, etc.

Thanks,
Brandon

Dear Mr. Neff,

Sir, I understand that the brake locked and it was released to move the airplane off the runway. Can you advise if there was a cause found yet for the brake locking? Thanks in advance.
