

NATIONAL TRANSPORTATION SAFETY BOARD PILOT/OPERATOR AIRCRAFT ACCIDENT/INCIDENT REPORT

This form to be used for reporting civil and public aircraft accidents and incidents

BASIC INFORMATION

Accident/Incident Location

Nearest City/Place: Norwood State: Co

ZIP: 81423 Country: _____

Latitude: N39 09' 54" Longitude: W108 18'23"

(Enter in decimal degrees or degrees:minutes:seconds)

Accident/Incident Date/Time

Date: 12/23/2018 Local Time: 3:10 PM

mm/dd/yyyy

Time Zone: MST

Collision with Other Aircraft: ☐ Midair ☐ On-ground ☒ None

AIRCRAFT INFORMATION

Registration Number: N3120S

Manufacturer: Cessna

Model: 182G

Serial Number: 18255620

Year of Manufacture: 1964

Amateur-Built: ☒ Yes ☐ No If Yes: ☐ Kit/Plans ☐ Original Design Make: _____

☒ IFR-Equipped and Certified

☐ Commercial Space Flight

☐ Unmanned Aircraft

Maximum Gross Weight: 2800 lbs

Weight at Time of Accident/Incident: 2306 lbs

Number of Seats: 4 Flight Crew Seats: 1

Cabin Crew Seats: _____ Passenger Seats: 3

Number of Engines: 1

Category of Aircraft

- ☒ Airplane
- ☐ Balloon
- ☐ Blimp/Dirigible
- ☐ Glider
- ☐ Gyroplane
- ☐ Helicopter
- ☐ Powered Lift
- ☐ Rocket
- ☐ Ultralight
- ☐ Unknown

Description of Damage to Aircraft and Other Property (Use additional sheet if necessary)

Prop, engine, exhaust pipe, lower cowl, nose strut/gear, windshield, both wing tips, wing upper skins outboard of struts.

NARRATIVE HISTORY OF FLIGHT (Please type or print in ink)

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

Aircraft returned to service 11/21/2018 after annual inspection. Approximately 3 flights totalling approximately 3 hours conducted without incident or problem by two partnership pilots since return to service.

Pilot and sole occupant departed Hopkins Field, KAIB, Nucla, Co at about 1400 MST after standard preflight inspection. About 68 gallons of fuel in dual wing tanks with fuel selector on both. No visible moisture, bright sun, blue skies, a few scattered high clouds. I flew using full, partial and no carb heat while monitoring my carb temp gauge to maintain carb temp above 5 degrees C, the upper limit of the Cessna 182G cautionary range(0-5 degrees C).

Climbed SE to 13500' passing to south of Lizard Head Peak, crossed south to north Lizard Head Pass and flew westbound descending to 12,500'. On this descend I observed backlit ice crystals and specifically noted no airframe icing. I only observed these crystals for about 15 seconds. I heard a departing jet from Telluride Airport, established positive communications of 123.0 mhz and advised I was at 12,500', 15 miles SE of the Cones VOR, and summarized that I should not be a factor. I continued my descent NW to the area of Norwood, Co where I decided to land on my private dirt strip to relief some pressure from an overinflated nose strut. I conducted a long, straight in approach to land on Rwy 05 while retarding throttle and descending with first 30 degrees flap and then increasing to 40 degree flaps. I conducted my pre-landing check several times and noticed I was still running partial carb heat. I eliminated carb heat, as I usually do, to prevent the injection of unfiltered air into my engine(I had driven the strip earlier that day and knew it to be dry, with dust generated by driving on it). I added nose up elevator trim and noted that my aircraft was unexpectedly drifting left(west). I applied partial throttle and got no engine response. I then applied full throttle for a go around, while preparing to relieve nose up trim, and got no engine response. At this point I was in full short field landing configuration with a nose high attitude and 40 degrees flaps. I knew I had 50' trees immediately below me. I knew I had a 80' tree a couple hundred feet in front of me. I attempted to get the nose down while turning right(east) with rudder and aileron. Out of the left side windows I observed the ground "rushing up" at me, with no engine power generated and I impacted near the center of the dirt airstrip in the normal area of a landing touch down, at about a 45 degree angle to the strip. Initially, I thought I hit the right wing tip first, but later examination of the aircraft and scene, indicates I might have been wrong. The plane stopped in a basically wing level attitude with a tail high, nose low position. The ELT was going off. I observed fuel, flowing from the left wing overflow. I turned off the fuel, ignition and master, released the floor mounted secondary seat stop, and exited the aircraft from the pilots left door. I turned off the ELT and disconnected the antenna coax at the unit. I called San Miguel Dispatch and advised of the event and stated emergency services were not needed, and that I was not injured.

I took several scene pictures and then rapidly hiked to my 1/2 mile distant residence while calling my aircraft IA mechanic, Mark Hussman of Smiling Aviation Delta, Colorado.. I advised I needed to stop the fuel flow from the left overflow and needed to confirm I could bucket strap lift off the aircraft crankshaft. I returned with a backhoe, lifted the aircraft as described and blocked the nose up. The fuel flow stopped.

I noted that the initial impact appears on the dirt strip about 150' to the SW of the aircraft stopping point. This location has a broken front wheel yoke containing tire and what I believe is the shimmy dampener. Under the aircraft's belly is the broken front strut. Contents from a maintenance/cleaning pail are shattered out the left side of the aircraft. The left baggage door is open.

I reviewed 2018 FAR AIM written and the NTSB website. I reported the incident to the emergency NTSB line and was transferred to NTSB investigator David Bowlin. I provided him a verbal overview of the incident, and supplied him scene and cockpit photos. He advised that I needed to complete a 6120.1 form and that I was authorized to move and secure the aircraft.

The aircraft log books are currently at Smiling Aviation, Delta, Colorado following the recent annual inspection. I will have to obtain the correct engine times and engine manufacture date when I get the logs back.

RECOMMENDATION (How could this accident/incident have been prevented?)**Operator/Owner Safety Recommendation**

If engine failure was secondary to the formation of carburetor ice, the application of full carburetor heat with mixture leaning, before throttle reduction on landing approach, may have provided partial and near full power when needed for course correction and ultimately, a go around. Although the carburetor temperature gauge indicated normal range when using partial and full carb heat (above 5 degrees C), the ice crystals observed at about 13000' were unusual for this environment and might have suggested a higher humidity than reflected in weather station reports (KAIB and KTEX). The precautionary use of carb heat, even though operating between 5 and 10 degrees C, might have been more prudent than removing carb heat because of the concern of ingesting unfiltered and dirty air into the engine from a short field landing on known soft and dry dirt surface.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)

Was there Mechanical Malfunction/Failure? ☐ Yes ☐ No
(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)
