

To:

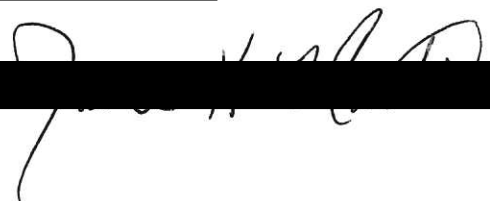

National Transportation Safety Board,
Whom it may concern,

On 29-DEC-2018 we were hired to retrieve FlyOKair's Cessna 152 from the approximate location of Mineral Springs Texas. Upon our arrival of the crash site we noted the aircraft in a nose down position with severe damage. Field inspection reveled no fuel in the fuel tanks and no evidence of fuel leakage onto the ground in the area. Upon making the determination that the fuselage and wings would not be repairable we proceeded to dismantle the aircraft in the field requiring cutting several parts off the wings to aide in disassembly and removal. Aircraft was successfully loaded and removed from the private property. Owners of the property advised us that no damage to their property had occurred requiring compensation of any kind. Aircraft was then delivered to Shawnee Regional Airport (KSNL).

If any additional information is needed that we may be able to provide please feel free to contact us at any time.

Regards,

James K. Martin
Martin Aircraft, LLC.
