Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

N450AM sustained damage to all 4 main rotor blades and portions of the tail boom. Damage assessment is underway at a third party vendor. The Ambulance sustained damage to the rear cab on the driver's side and roof. Complete damage estimates to the ambulance are being established through internal processes at Faith Ambulance Service.

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The Spearfish Base crew of N450AM based out of Black Hills Airport (KSPF) including the pilot, Christopher Miller, the Flight Nurse, Mickey Neilan, and the Flight Medic, Anthony Vopat, were notified of a flight request on 3 March 2019. The Pilot performed a Risk Assessment, completed final preparations with the crew and launched at 2337 local. The flight arrived in Union Center, SD and after coordination with the ambulance crew identified the designated landing spot in a school parking lot. The ambulance crew identified the hazards to the crew (wires and snow) and a high reconnaissance was completed to verify obstacles and course of action. As part of the crew discussion, it was decided that upon landing and after the aircraft was at idle, the medical crew would deplane and move required gear from the cabin area, to expedite the move from the helicopter to the ambulance because of the outside temperatures (-15 F with winds blowing at 10-15). The ambulance would be taking the crew to the patient located at a nearby location. The aircraft touched down safely at 2313 and after bringing the aircraft to Idle and flat Pitch, the Pilot cleared the med crew to depart the aircraft. The incident ambulance was located at the 11 o'clock position upon landing and 40-50 feet outside the rotor disc. All crew members noted that the ambulance was stationary during landing and while the crew began their equipment off-load. At some point, estimated at 30 secs after going to flight idle by the Pilot, the ambulance moved forward into the rotor disk. At that juncture, the Pilot was still at the controls and secured in the seat, the Flight Nurse was in the vicinity of the left front crew door securing the left side cabin door, and the Flight Medic was adjacent to the left cabin door grabbing the required gear. The impact of the main rotor blades with the ambulance (rear cabin structure above the driver's position), caused the aircraft to yaw right and lifted the left skid off the ground simultaneously. The Flight Medic was knocked over by the moving skids. The Flight Nurse was not impacted from the aircraft or any debris. The Pilot immediately shut the aircraft down and applied the rotor break. I

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

Air Methods has begun a thorough review of this incident through a Root Cause Analysis (RCA). Crew procedures are in accordance with current General Operating Manual procedures, but following the RCA we will assess to determine if alternate procedures might help to mitigate the likelihood of further occurrences.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☐ Yes ☒ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

There were no mechanical malfunctions prior to the impact of the blades with the ambulance.
