Description of Damage to Aircraft and Other Property *(Use additional sheet if necessary)*

The landing gear and horizontal stabilizer were damaged

NARRATIVE HISTORY OF FLIGHT *(Please type or print in ink)*

Describe what occurred in chronological order, including circumstances leading to and nature of accident/incident. Describe terrain and include wreckage distribution sketch if pertinent. Attach extra sheets if needed. State departure time and location, services obtained, and intended destination. Provide as much detail as possible.

The flight was planned to be made from KDWL to KAUS for time building and for fun. Elizabeth Largent sat in left seat and was PIC. Pedro Lovo, also a private pilot, sat in the right seat as passenger. We started preflight at 1530. After receiving ATIS, VFR flight following clearance, and taxi instructions, Elizabeth added some power and turned away from United Flight Systems to check breaks. The breaks worked normally. Pedro did not test breaks, as he was not acting as PIC. Elizabeth turned right on Mike, passed Texas Flight School, and attempted to turn left onto Juliet. The airplane was not turning, so she attempted to add left break to sharpen the turn. At this point, Elizabeth told Pedro her rudder and break was not working. The break had no pressure. She reduced power and applied both breaks, but the tailwind kept the plane moving and neither breaks worked. Pedro then tried his breaks, and his did not work either. The airplane started to swerve, and it was clear the airplane was uncontrollable via rudders and breaks. Elizabeth kept the airplane heading for taxiway November in order to remain clear of the sealane and movement areas. Pedro cut the mixture. The right wheel fell into the ditch and turned the plane into the grass - where it came to complete stop. Elizabeth kept applying breaks and held the nose up to help the plane break and keep the prop from busting the ground. She then called ground control and told them what had happened and asked for assistance.

Damage - the landing gear was bent in and the right horizontal stabilizer was bent. No other persons or property were harmed.

RECOMMENDATION (How could this accident/incident have been prevented?)

Operator/Owner Safety Recommendation

The pilot's left break was previously reported, twice, for being "loose". The issue could have been addressed more thoroughly even if it was occasional, but still recurring.

MECHANICAL MALFUNCTION/FAILURE (If more space is needed, continue on separate sheet)Was there Mechanical Malfunction/Failure? ☒ Yes ☐ No

(If yes, list the name of the part, manufacturer, part no., serial no., and describe the failure.)

Breaks and rudder pedals on both seats became unresponsive during taxi operations.
